## SPECIFICATIONS

**Power Source:** 110/120/220/240 V AC  $\pm 10\%$  AUTO,  
50/60 Hz  $\pm 0.5\%$

**Power Consumption:** Approx. 28 watts

**Television System:** EIA Standard (525 lines, 60 fields)  
NTSC color signal

**Video Recording**  
System: 4 rotary heads, helical scanning system  
Luminance: FM azimuth recording  
Color signal: Converted subcarrier phase shift recording

**Audio Track:** 2 tracks (NORMAL), 2 channels  
(Hi-Fi AUDIO SOUND)

**Tape Format:** Tape width 1/2" (12.7 mm), high density tape

**Tape Speed:** SP mode: 1-5/16 i.p.s. (33.35 mm/s)  
LP mode: 21/32 i.p.s. (16.67 mm/s)  
SLP mode: 7/16 i.p.s. (11.12 mm/s)

**Record/Playback Time:** 8 HRS. with 160 min. type tape used in SLP mode

**FF/REW Time:** Less than 6 min. with 120 min. type tape

**Heads:** Video: 4 rotary heads  
Audio: 2 stationary heads,  
(NORMAL AUDIO SOUND)  
2 rotary heads  
(Hi-Fi AUDIO SOUND)  
Control: 1 stationary head  
Erase: 1 full track erase  
1 audio track erase for audio dubbing

**Input Level:** Video: VIDEO IN Jack (RCA type)  
1.0 Vp-p, 75  $\Omega$  unbalanced  
Audio: AUDIO IN Jack (RCA type)  
(Right, Left)  
-20 dB, 50 k $\Omega$  unbalanced  
MIC IN Jack (M3) (Right, Left)  
-70 dB, 4 k $\Omega$  unbalanced

**TV Tuners:** VHF Input: VHF Ch2-Ch13,  
cable channels "A"—"W",  
"A-2", "A-1" 75  $\Omega$  unbalanced  
UHF Input: Ch14-Ch83,  
300  $\Omega$  balanced

**Output Level:** Video: VIDEO OUT Jack (RCA type)  
1.0 Vp-p, 75  $\Omega$  unbalanced  
Audio: AUDIO OUT Jack (RCA type)  
(Right, Left)  
-9 dB, 600  $\Omega$  unbalanced  
RF Modulated: Ch3/Ch4 switchable,  
72 dB $\mu$ , (Open Voltage)  
75  $\Omega$  unbalanced

**Video Horizontal**  
Resolution: Color: more than 230 lines  
B/W: more than 230 lines

**Audio Frequency**  
Response: 20 Hz ~ 20 kHz (Hi-Fi AUDIO SOUND)  
(10 dB down)

**Signal-to-Noise Ratio:** Video: SP: better than 43 dB  
LP: better than 41 dB  
SLP: better than 41 dB  
(Rohde & Schwarz noise meter)

**Dynamic Range:** Audio: better than 80 dB  
(Hi-Fi AUDIO SOUND)

**Wow and Flutter:** 0.005% (Hi-Fi AUDIO SOUND)

**Operation**  
Temperature: 41°F—104°F (5°C—40°C)  
Operating Humidity: 10%—75%  
Weight: 17.2 lbs. (7.8 kg)  
Dimensions: 16-15/16" (W)  $\times$  14-5/16" (D)  $\times$  4-1/4" (H)  
(430 mm  $\times$  364 mm  $\times$  108 mm)

**Accessories Supplied:** • Wireless remote control unit  
• VHF connecting cable  
• 300  $\Omega$ —75  $\Omega$  transformer  
• Twin-lead cable  
• V-Lock tool

**Available Tapes:** 1/2" VHS video cassette tapes  
NV-T160 Approx. 1073 ft. (327 m), 160,  
320, or 480 min.  
NV-T120 Approx. 810 ft. (247 m), 120, 240,  
or 360 min.  
NV-T60 Approx. 417 ft. (127 m), 60, 120,  
or 180 min.

Weight and dimensions shown are approximate. Specifications are subject to change without notice.

# INTRODUCTION

This Service Manual contains information which will allow the service technician to understand and service the Panasonic VHS recorder Model PV-1631M and the various accessories that complement the deck.

For a detailed technical explanation, please refer to the Training Manual on this model. Some of the Features incorporated in this model are: soft touch controls 14 position Electronic Tuner, 2 weeks/8 program Timer, Wireless Remote Control, One Touch Record Button (O.T.R), Picture Search, Field Still, Light Editing, a \*Dolby Noise Reduction system for normal audio, Hi-Fi Audio HD Sound System, Auto Rewind, Frame Advance, Field-Slow.

This model use a multi-function display indicator which combines indicators for time, tape counter, speed, transport functions, and timer record into one easy to read digital display.

The above features plus the VHS format make the PV-1631M table top VCR's an excellent unit for your enjoyment.

Just slightly ahead of our time...Panasonic.

# SAFETY PRECAUTIONS

## GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.
4. USE A SEPARATE ISOLATION TRANSFORMER FOR THIS UNIT WHEN SERVICING.

## LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\text{M}\Omega$  and  $5.2\text{M}\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be  $\infty$ .

## LEAKAGE CURRENT HOT CHECK (See figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5\text{k}\Omega$ , 10 watts resistor, in parallel with a  $0.15\mu\text{F}$  capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Figure 1

# ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.  
**CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device).

**"NOTE to CATV system installer:**

This reminder is provided to call the CATV system installer's attention to Article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical".

# FEATURES

Your Panasonic VCR has these special features to enhance your viewing enjoyment. Feature operations are described at the referenced page numbers. To locate other information, please refer to the Table of Contents.

**Watch one channel while recording another**

**Audio 2-channel**

**Fine-editing**

**Cable-ready**

**Multi-motion playback**

- Fast Search
- Field-Still
- Frame Advance
- Field-Slow

**DOLBY Noise Reduction System**

**Unattended (Timer) Recording**

**Front Loading**

**Extended Timer One Touch Recording (240MIN)**

**Hi-Fi AUDIO HD SOUND SYSTEM**

**WIRELESS REMOTE CONTROL**

**Up to Eight-hour recording**

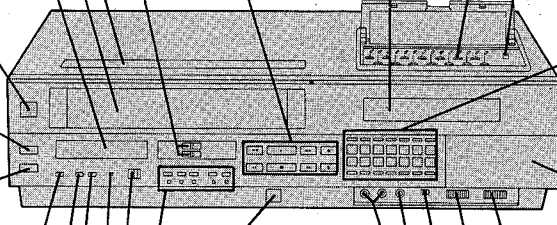

This symbol warns the user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any inside part of this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

# DESCRIPTION OF CONTROLS

## TOP and FRONT

- 
- **CASSETTE WINDOW**
  - **CASSETTE COMPARTMENT**
  - **REC LEVEL METER**  
For monitoring the Audio Level during recording or playback.
  - **EJECT BUTTON**  
Push this button to remove the cassette. "■" flashes on the Multi Function Display while the tape is being ejected.
  - **POWER BUTTON**  
This button is used to turn the VCR on and off. When this button is pushed, counter appears on the Multi Function Display.
  - **VCR/TV SELECTOR**  
**VCR:** To monitor video recordings or to view playback.  
**TV:** To watch TV or to view another program while recording a different program.  
When this is set to VCR, "VCR" appears on the Multi Function Display.
  - **TIMER BUTTON**  
This button is used to put the VCR in Unattended Recording mode after programming functions have been completed.  
When this button is ON, "□" appears on the Multi Function Display, and you will not be able to operate the unit manually.
  - **MEMORY BUTTON**  
When this button is in the "ON" position, the tape will stop when the Tape Counter reaches "0000" during rewind.
  - **REC LEVEL CONTROLS**  
For manual operation of Audio Rec Level, with Hi-Fi AUDIO sound, set the REC LEVEL Switch to MANUAL and adjust both REC LEVEL Controls until the REC LEVEL Meter reads around 0 dB. This position usually indicates the best sound reception.
  - **MULTI FUNCTION DISPLAY**
  - **PUSH BUTTON CONTROLS**
  - **WIRELESS REMOTE SENSOR**  
Receives signal from Wireless Remote Control.
  - **AUDIO OUTPUT SELECT BUTTONS**  
**INPUT SIGNAL SELECTOR**  
**AUDIO:** For use this VCR as an Audio Tape Deck.  
**LINE:** For re-recording, audio dubbing or camera recording.  
**TUNER:** For regular TV recording with monaural sound recording.  
**AUDIO 2 CH:** For simulcast (stereo) recording.
  - **DOLBY NR INDICATOR**  
When DOLBY NR Switch is ON. Indicator light goes on.
  - **RESET BUTTON**  
Pushing this button causes the Tape Counter to return to "0000". By beginning the recording at "0000", subsequent playback will be more convenient.
  - **UHF/VHF/CATV FINE TUNING CONTROLS (UNDER HINGED COVER)**
  - **AUTOMATIC FINE TUNING (AFT) SWITCH (UNDER HINGED COVER)**  
Under normal conditions, leave the AFT Switch "ON".
  - **CHANNEL SELECTOR BUTTONS/INDICATOR LIGHTS**  
Select the channel (2~83, A~W, A-2, A-1) you wish to view or record by pushing any one of these 14 buttons.
  - **BEHIND HINGED PANEL**
  - **TRACKING CONTROL**  
Use this control during regular playback if the image is partially obscured by bands of noise.
  - **SLOW TRACKING CONTROL**  
If the slow-motion or still picture contains bands of noise, this control may require adjustment.
  - **TAPE-SPEED SELECTOR (SP/LP/SLP)**  
Set this selector for the desired recording speed.
  - **HEADPHONES JACK**  
For connecting a Headphone.
  - **MICROPHONE INPUT JACK**  
For connecting a Microphone. This is useful for recording and audio dubbing.

## BEHIND HINGED PANEL

- **CHANNEL NUMBER HOLDER**  
Pull it out for changing channel tabs.

### DOLBY NR SWITCH

Set this switch to ON for audio noise reduction. Indicator lights when ON.

### ONE TOUCH RECORD (O.T.R) BUTTON

One Touch Recording enables you to do impromptu recordings at any time. Just select the channel and push the ONE TOUCH RECORD Button for 30 minutes to 4 hours of recording.

### TIMER CONTROLS

Use to set the clock or to set the Timer to make an Unattended Recording when you are away from home, busy or asleep.

### REC LEVEL SWITCH

When this switch is in AUTO position, audio recording level is automatically adjusted.

## SIDE

### PICTURE CONTROL

Use this control to make the picture softer or sharper, whichever you prefer.

## AUDIO OUTPUT SELECT BUTTONS

- **AUDIO OUT BUTTONS/INDICATOR LIGHTS**  
One of these buttons is used to select the audio signal for the TV speaker, a Headphone, or AUDIO LINE OUT.

- **NORMAL AUDIO BUTTON/INDICATOR LIGHT**  
Push this button so that indicator lights for NORMAL AUDIO sound playback.

- **HI-FI AUDIO BUTTON/INDICATOR LIGHT**  
Push this button so that indicator lights for Hi-Fi AUDIO sound playback.

## DESCRIPTION OF CONTROLS (CONTINUED)

### PUSH BUTTON CONTROLS

#### • REWIND/SEARCH ◀◀ BUTTON

Push this button to rewind tapes. "REW" and "◀" appear on the Multi Function Display. During the playback mode, holding this button down will allow you to view the picture in reverse rapidly. "◀" flashes.

#### • PLAY BUTTON

Push this button to play back recorded tapes. "PLAY" and "▶" appear on the Multi Function Display.

#### • FAST FORWARD/SEARCH ▶▶ BUTTON

Push this button to move the tape forward rapidly. "FF" and "▶" appear on the Multi Function Display. During the playback mode, holding this button down will allow you to view the picture in the forward direction rapidly. "▶" flashes.

#### • RECORD BUTTON

Recording is started by pushing this button and the PLAY Button at the same time. "REC" and "▶" appear on the Multi Function Display.

#### • PAUSE/STILL BUTTON

Push this button to temporarily stop the tape movement in either the recording or playback mode. During playback a still picture is produced when the pause is used. Push again to release pause. When this button is pushed, "PLAY" and "■" appear on the Multi Function Display.

#### • AUDIO DUB BUTTON

When this button and PLAY Button are pushed simultaneously, sound from another source can be recorded on the tape in place of the original sound.

#### • SLOW BUTTON

While viewing a still picture, push this button to advance the picture one frame at a time. "▶" flashes. During the playback mode, pushing this button will allow you to view a slow-motion picture. "SLOW" appears on the Multi Function Display.

#### • STOP BUTTON

Push this button to stop the tape. "■" appears on the Multi Function Display.

## MULTI FUNCTION DISPLAY

- **DIGITAL CLOCK**

Normally, the present time is displayed.

- **TAPE COUNTER**

Tape counter number is displayed.

- **FUNCTION INDICATOR "g88W"**

This shows the mode of VCR (EJECT, PLAY, REC, REW, FF, PAUSE, STILL, SEARCH, STOP, FRAME ADVANCE, SLOW).

- **DEW INDICATOR "82W"**

This indicator appears if excessive moisture condenses in the unit. If the DEW Indicator is ON, the unit will not operate. If this happens, leave the VCR ON and let it remain at room temperature until this indicator goes off.

- **TIMER INDICATOR "T"**

When TIMER Button is set to ON, this indicator appears and you will not be able to operate the unit manually.

- **PROGRAM NUMBER "1", "2", "3", or "4"**

This shows the program number for Timer Recording.

- **CHANNEL INDICATOR "CH"**

This indicator flashes when selecting channel for Timer Recording.

- **O.T.R. INDICATOR "OTR"**

When OTR is set, this indicator appears.

- **MEMORY INDICATOR "M"**

When MEMORY Button is set to ON, this indicator appears.

- **DUBBING INDICATOR "DUB"**

When audio dubbing is set, this indicator appears.

- **VCR/TV INDICATOR "VCR"**

This indicator appears when the VCR/TV Selector is set to VCR.

- **SPEED INDICATOR "SP", "LP", "SLP"**

This shows the tape speed during recording and playback.

- **CASSETTE-IN INDICATOR "C"**

This indicator shows the condition of the cassette tape in the unit.

No "C": There is no cassette in the unit.

"C": There is a cassette in the unit and some interval to the end of the tape.

Flashing "C": The automatic rewind took place at the end of tape during playback, recording or fast forward. The indicator continues flashing until the subsequent mode is set.

## DESCRIPTION OF CONTROLS (CONTINUED)

### REAR

In some cases, the product may differ slightly from illustrations or photographs. Please be assured that this difference is not due to mistake but to ongoing product improvement.

# UHF AND VCR PLAYBACK CONNECTIONS

If you receive UHF TV broadcasts, connect TV antennas to the VCR and TV as shown below.

## UHF CONNECTION

### ① Indoor or outdoor UHF antenna

- Remove the UHF antenna twin lead wires from the back of your TV, and attach these wires to the UHF IN terminals of the VCR.

### ②

- Attach the Twin Lead (flat) Cable (supplied) to the UHF OUT terminals of the VCR.
- Attach the other end to the UHF terminals of the TV.

If you receive only UHF Channels, you must also add one of the following two connections ③ or ④ between your VCR and TV. This connection is necessary to view tapes in playback and to use your TV as a monitor.

- If you have only screw type VHF terminals on your TV, use connection ③. If using connection ③, set the switch of the VHF Connecting Cable to lower (300  $\Omega$ ) position.
- If you have a VHF terminal on your TV, use connection ④. If using connection ④, set the switch of the VHF Connecting Cable to upper (75  $\Omega$ ) position.

- Attach the VHF Connecting Cable (supplied) to the VHF OUT terminal of the VCR.
- Attach the other end of the cable to the VHF terminal of the TV (connection ③) or the VHF antenna terminals of the TV (connection ④).

# CABLE CONNECTIONS

## CABLE-VCR-TV (FOR CATV/PAY CHANNELS RECORDING/PLAYBACK)

The unit has an extended range, and can tune the Mid-Band and Super-Band cable channels. (Channels A~W, A-2, A-1). Also, the unit can tune to any of the 70 UHF channels (14~83). Refer to VCR FINE TUNING.

### BASIC HOOK-UP

However, if you subscribe to a special channel which is scrambled—you probably have a descrambler box for proper reception. The PV-1631M by itself cannot properly receive a scrambled program since it does not contain a descrambler. In order for the PV-1631M to properly receive a scrambled program, your existing descrambler must be used. There are two commonly used methods of connection in this case.

### TYPICAL CABLE SYSTEM HOOK-UPS WITH CABLE CONVERTER/DESCRAMBLER BOXES

The above cable hook-up allows VCR-TV functions except for viewing one channel while recording another.

The above cable hook-up allows VCR-TV functions, including viewing one channel while recording another, but it requires two cable TV Converter Boxes, one Switch Box and one 2-Way Splitter.

Since the PV-1631M has an extended range of tuning, tuning-programming of non-scrambled Mid-Band and Super-Band TV programs is possible. When a cable converter or descrambler box is connected to the unit, all Unattended Recording functions will continue to operate with the exception of changing channels automatically. Channel selection will have to be performed with the cable converter. Unattended Recording is therefore limited to one channel at any given time.

- Using the CATV Adaptor/PV-CT2 and the cable descrambler box:

All functions (e.g. Timer Recording, Recording one channel while watching another) will be operable for both regular TV channels and one pay TV channel. If you use the PV-CT2, refer to the Operating Instructions of the PV-CT2.

#### Note to CATV system installer:

This reminder is provided to call the CATV system installer's attention to Article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

# GLOSSARY OF TERMS

## ACC

Automatic Color Control used to maintain an overall constant color signal level in the color circuits.

## ACK

Automatic Color Killer.

## Adjacent Track

This is the name of the video track to the immediate left or right of the track of concern.

## AFC

Automatic Frequency Control used to phase-lock the color circuits to either the recording or playback color signal, in order to achieve a stable color signal.

## AFT

Automatic Fine Tuning... This is a special circuit found in most recent TV sets which makes the local oscillator of the TV tuner follow the channel of concern in order to produce a stable IF frequency. In other words, if for any reason the TV station being received changes frequency, the AFT circuit will automatically compensate so that no interference will be seen on the screen, i.e., no manual fine tuning is necessary.

## AGC

Automatic Gain Control used to maintain an overall constant picture level in the luminance circuits.

## APC

Automatic Phase Control used to help phase lock the color circuits to either the recording or playback color signal in order to achieve a stable color signal.

## Azimuth

A term used to describe the left to right tilt of the gap of a recording head, if it could be viewed straight on.

## Balanced Modulator

A circuit so designed to give as an output the frequency sum or frequency difference of its two input signals. Any special characteristics of one of the input signals will be present in the output signal.

## Beats

A term used to describe the unwanted signals produced when two original signals are allowed to be mixed together.

## Bipolar PG

Pulse Generator signals that have both positive and negative excursions.

## Burst

A short time occurrence (8 to 10 cycles) of the 3.58MHz subcarrier signal, appearing right after horizontal sync but centered on the blanking portion of the video waveform. Burst is used to keep the color oscillator of a TV receiver locked to the broadcast station.

## B/W

Abbreviation for Black and White.

## C

Capacitor.

## C Signal

The color portion of a video signal.

## Capstan

A small rotating metal dowel which drives the recording tape to assure positive tape movement.

## Chroma

The color portion of a video signal.

## Chrominance

The color portion of a video signal.

## Clamp

The process of giving an AC signal a specific DC level.

## Control Signal

A special signal recorded onto the video tape which is used during playback as a reference for the servo circuits.

## Converted Subcarrier

This is the process of frequency shifting the color 3.58MHz subcarrier and its sidebands down to 629kHz.

## Crosstalk

The name given to the unwanted signals obtained when a video head picks up information from an adjacent track.

## CUE

To scan the playback picture at a faster than normal speed in the Forward direction.

## D

Diode.

## DL

Delay Line.

## Dark Clip

After emphasis, the negative going spikes (undershoot) of a video signal may be too large in amplitude for safe FM modulation. A dark clip circuit is used to cut off these spikes at an adjustable level.

## DDC

Direct Drive Cylinder... as used in VHS, this means that the video heads are driven by a self-contained brushless DC motor using no belts or gears. DD cylinders produce pictures with better stability.

## Delta Factor ( $\Delta f$ )

A term used to indicate that a playback signal off the video tape has some jitter or "wow and flutter".  $\Delta f$ , or "a change in frequency" means that the color signal off the tape is not a stable frequency of 629kHz, but rather a signal whose frequency at any instant is some small amount above or below 629kHz.

## Deviation

A term used to describe how far the FM carrier swings when it is modulated. In VHS the upper limit is 4.4MHz.

## Dew Detector

A variable resistor whose resistance value depends upon the ambient humidity.

## Dihedral

A term used to describe the relative position between the two video heads as they are mounted in the head cylinder. Perfect dihedral means that the tips of the heads are exactly 180° apart.

## Dropout

A momentary absence of FM or color signal off the tape, whether due to uneven oxide or a coating of dust on the tape or video heads.

**Duty Cycle**

In describing a rectangular waveform, the "duty" refers to the percentage of off time and on time for one complete cycle. 50—50 means that there are equal periods of off time and on time for one cycle and this would be a square wave.

**E-E**

Electronics to Electronics...this is the picture viewed on the TV set when a recording is being made. This picture goes through some but not all of the circuits of the recorder and is used to test the operation of said circuits.

**EQ**

Shortened form of "Equalization", used in the audio circuits.

**Emphasis**

The process of boosting the level of the high frequency portions of the video signal.

**FG**

Frequency Generator used in the servo circuits.

**FL**

Filter.

**FM Signal**

The luminance portion of the video signal is used to control the frequency of astable multivibrator. The output of this multivibrator is a frequency modulated (FM) signal shifting from 3.4MHz to 4.4MHz (plus sidebands).

**Field**

One half of a television picture. A field consists of 262.5 horizontal scanning lines across the picture tube. Two fields are necessary to complete a fully scanned TV picture (frame). First, one field is "sprayed" on the picture tube, starting at the top of the tube with Line 1, and ending at the bottom with Line 262.5. Then, the next field begins at the top of the tube again with Line 262.5 and ends at the bottom with Line 525. The lines of the second field lie in-between the lines of the first field. This property of falling in-between lines is called "interlacing". The two sweeps of the picture tube, or two fields make up one complete TV picture of "frame". Frame repetition is 30Hz, therefore field repetition is 60Hz.

**Flagwaving**

This is the term used to describe a TV set's ability to accept unstable playback pictures from a video tape recorder. All home VTR's have some degree of playback instability. A TV set with a long horizontal AFC time constant may not recover from the VTR's instability before the active picture is being scanned. This can cause a bending or flapping from side to side of the top inch or so of the screen. This movement is called "flagwaving".

**Frame**

One complete TV picture. See "Field".

**Gate**

A circuit which will deliver an output only when a specific combination of its inputs are present. For use in analog or digital applications.

**Guard Band**

This is the space between video tracks on the video tape in the SP mode. Guard bands contain no information.

**Hall Effect IC**

An external magnetic field causes current to flow in this type of device.

**HD**

Horizontal Drive signal.

**Head Cylinder**

A cylindrical piece of metal which houses the video heads. The tips of the heads protrude slightly from the surface of the cylinder so that they may scan the tape as the cylinder spins.

**Head Switching**

The action of turning off during playback, the video head which is not in contact with the video tape. A particular video head will be turned off 30 times per second. This is done so that the head which is not scanning the tape, and therefore not delivering a good signal, cannot contribute any noise to the playback signal.

**Head Switching Pulse**

The signal which is applied to the Head Amplifier to perform head switching. This is a square wave at 30Hz, with a 50—50 duty cycle.

**Helical**

A word used to describe a general type of VTR in which the tape wraps around the video head cylinder in the shape of a 3-dimensional spiral, or "helix". The video tracks are recorded as a series of slanted lines.

**IC**

Integrated Circuit.

**Interchangeability**

A term used to describe how well a particular VTR will play back a tape recorded on another VTR of the same type. Good interchangeability indicates good playback.

**Interlacing**

The property of the scan lines of two television fields to lie in-between each other. See "Field".

**Interleaving**

A term used to indicate that the harmonics of the chrominance signal lie in-between the harmonics of the luminance portion of the video signal as it is viewed on a spectrum analyzer. This means that the color information of a video signal does not interfere with, although it is broadcast at the same time as, the luminance information.

Also, signals which have this interleaving property are not readily seen on a TV screen, because of their virtual cancellation characteristics.

Interleaving signals (fi) must have the following frequency relationship:

$$f_i = \left( \frac{2n+1}{2} \right) \times f_H \quad (n = 0, 1, 2, 3, 4, \dots)$$

$$f_H = 15,734 \text{ Hz (H sync frequency)}$$

**Jitter**

The name of the effect on the playback picture if a VTR has too much "wow and flutter". The picture appears to have a rapid shaking movement.

**L**

Coil.

**Luminance**

This is the portion of video signal which contains the sync and B/W information.

**MMV**

Monostable Multi-Vibrator...Usually an IC device which gives a logic high or low output with a variable duration upon receipt of an input pulse or transition.

### **Non-Linear Emphasis**

This is similar to regular emphasis with the difference that small level high frequency portions of the signal are given more of a boost than higher level high frequency portions.

### **NTSC**

The National Television Systems Committee. These four letters identify the United States color television standard.

### **O.T.R.**

One Touch Recording (O.T.R.) enables you to do impromptu timer recordings at any time. When you have to go out for urgent matters or you are going to sleep, this function is very useful. Just select the channel and push the O.T.R. Button for 30 minutes to 2 hours of recordings. After recording, the VCR will be turned off automatically.

### **PG**

Pulse Generator used in the servo circuits.

### **Q**

A term used to describe the graphic response of a filter or tuned amplifier.

### **R**

Resistor.

### **Review**

To scan the playback picture at a faster than normal speed in the Reverse direction.

### **RF**

Radio Frequencies.

### **Rotary Chroma**

The name of the process used in VHS to change the phase of the chrominance signal at a rate of 15,734 (same as H sync frequency) times per second.

### **Rotary Transformer**

A device used to magnetically couple RF signals to and from the spinning video heads, thus eliminating the need for brushes.

### **Sample and Hold**

A process used in comparator circuits by which the value of a particular signal is measured at a specific moment in time...then this value is stored for later use.

### **Search**

To scan the playback picture at a faster than normal speed in either the forward or reverse direction.

### **Servo**

Short for Servo mechanism. This is an electro-mechanical device whose mechanical operation (for instance motor speed) constantly being measured and regulated so that it closely matches or follows an external reference.

### **Skew**

Another way of saying Tension Error. Skew is actually the change of size or shape of the video tracks on the tape from the time of recording to the time of playback. This can occur as a result of poor tension regulation by the VTR, or by ambient conditions which affect the tape.

### **Subcarrier**

The name of the 3.58MHz continuous wave signal used to carry color information.

### **SS**

Slow and Still.

### **T**

Transformer.

### **TP**

Test Point.

### **TR**

Transistor.

### **Tension Error**

See "Skew".

### **Time Base Stability**

A term used to describe how closely the playback video signal from a VTR matches an external reference video signal...in regard to sync timing rather than picture content.

### **Tracking**

This is the action of the spinning video heads during playback when they accurately track across the video RF information laid down during recording. Good tracking indicates that the heads are positioning themselves correctly, and are picking up a strong RF signal. Poor tracking indicates that the heads are off track, and picking up low level RF signal or noise.

### **VCO**

Voltage Controlled Oscillator...An oscillator whose frequency of oscillation is governed by an external voltage.

### **Video Head**

This is the electro-magnet used to develop magnetic flux which will put RF information on the tape. In VHS, two video heads are mounted in a rotating cylinder around which the video tape is wrapped. As the cylinder spins, each video head is allowed to alternately scan the tape.

### **Video Track**

The name of the RF information laid down during recording, as a particular video head scans across the tape.

### **VHS**

Video Home System.

### **VTR**

Video Tape Recorder.

### **VV**

Video to Video...or...the actual playback picture produced from a tape during playback.

### **VXO**

Voltage Controlled Crystal Oscillator...Similar to VCO except that a quartz crystal is used as a reference which can be varied.

### **White Clip**

After emphasis, the positive going spikes (overshoot) of the video signal may be too large for safe FM modulation. A white clip circuit is used to cut off these spikes at an adjustable level.

### **XTAL**

Abbreviation for crystal.

### **Y Signal**

The B/W portion of a video signal containing B/W information and sync.

## IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

# SAFETY PRECAUTIONS

## GENERAL GUIDELINES

1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.
4. USE A SEPARATE ISOLATION TRANSFORMER FOR THIS UNIT WHEN SERVICING.

## LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\text{M}\Omega$  and  $5.2\text{M}\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be  $\infty$ .

## LEAKAGE CURRENT HOT CHECK (See figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5\text{k}\Omega$ , 10 watts resistor, in parallel with a  $0.15\mu\text{F}$  capacitor, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

Figure 1

# MECHANICAL ADJUSTMENT PROCEDURES

## 1. DISASSEMBLY OF CABINET PARTS

### 1. DISASSEMBLY FLOWCHART

This flowchart indicates disassembly steps of the cabinet parts and the P. C. Boards in order to find the item(s) necessary for servicing. When reassembling, perform the step(s) in the reverse order. Bottom Plate can be removed separately.

#### Note:

1. When removing the front panel, work with care so as not to break the locking portions of the panel.
2. The 3 screws indicated by arrow marks on the bottom plate should be removed to remove the top case.

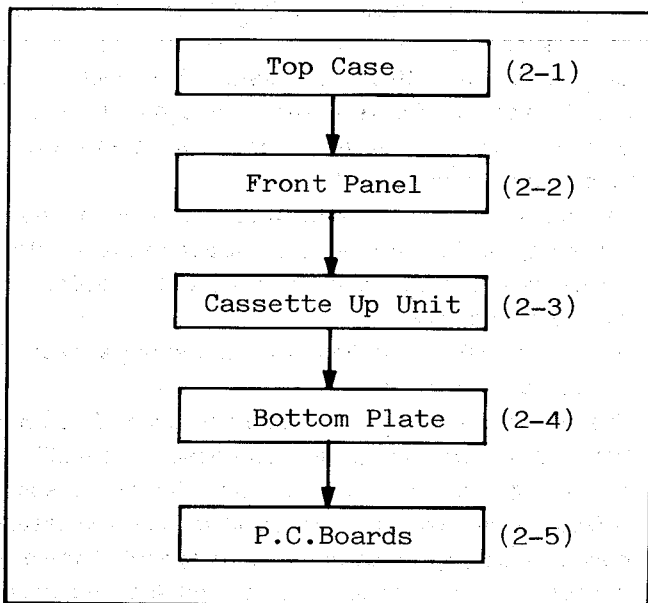

Fig. M1 Disassembly Flow Chart

### 2. DETAILED DISASSEMBLY METHOD

#### 2-1. Removal of the Top Case

Place the deck so that the left side faces down, hold the deck with your hand and remove 3 screws (A).

Fig. M2-1 Removal of Top Case

Remove 2 screws (B).

Then pull the top case toward the back and then carefully lift the front portion to remove.

Fig. M2-2 Removal of Top Case

#### 2-2. Removal of the Front Panel

Release 3 locking tabs. Then hold both right and left top portions of the panel and turn it towards the front of deck to remove.

Fig. M3 Removal of front Panel

### 2-3. Removal of the Cassette Up Unit

Remove 3 Screws (C) and unplug the connector P1551 on Connection C.B.A. Then remove Cassette Up Unit. First slightly lift the left side of Cassette Up Unit and then lift right side of Cassette Up Unit.

Fig. M4-1 Removal of Cassette Up Unit

### 2-3-1. Cassette Holder Down Position without Cassette Tape

The cassette Holder in down position without cassette tape should be done according to the following procedures for some adjustments.

1. Turns the power sw ON.
2. Insert 2 screwdrivers into the Cassette Up Unit from the front, positioning them right and left, as shown in (A) and (B) in Fig. M4-2. The screwdrivers should keep both side holder guide levers in the unlock position. By pushing down while pushing toward the rear on the Holder unit, the loading action will begin. Continue this pressure and screwdriver position until the Cassette Holder Unit clears the 3 locking tabs. After clearing the locking tabs the Cassette Up unit will move into the down position by itself.

Fig. M4-2 Cassette Down Condition Without Cassette Tape

3. Connect TP6005 and GND on System Control Section through a jumper wire.
4. After the adjustment, remove the jumper wire.

### Note :

When TP6005 and GND are connected through a jumper wire, Eject can be performed but not Cassette Loading.

### 2-4. Removal of the Bottom Plate

Place the deck so that the left side faces down, hold the deck with your hand and remove 6 screws (D).

Fig. M5 Removal of Bottom Plate

## 2-5. Opening of the P.C. Boards (Bottom, Signal Process)

Place the deck so that the left side faces down, hold the deck with your hand.

### 2-5-1. Main C.B.A.

Remove 5 red screws (E) and a Locking Tab. Then open the Main P.C. Board.

Fig. M6 Opening of P.C. Board

### 2-5-2. Signal Process C.B.A.

1. Disconnect the AC plug from the AC outlet.
2. Place the deck so that the left side faces down, hold the deck with your hand and remove 2 screws (F) and a locking tab on the Normal Audio C.B.A. Then open the Normal Audio C.B.A.
3. Remove the screw and jumper on the U/V Tuner Unit from bottom side.
4. Remove the 5 red screws (G).
5. Lift Signal Process C.B.A. Slightly and then turn the C.B.A. to set it as shown in Fig M8.
6. Remove the Top Cover Support Angle.

Fig. M7 Opening of P.C. Boards

Fig. M8 Setting of Signal Process C.B.A.

Note :

Be careful lest the surrounding wires should be damaged.

## 2. PROCEDURE FOR CLEANING OF UPPER CYLINDER UNIT

1. Position the Video Head or FM Audio Head to permit access for cleaning and hold the upper cylinder to keep it from turning while cleaning.
2. Gently rub the Video Head or FM Audio Head in direction of tape travel with Head Cleaning Stick (VFK27) moistened with Freon TF.
3. Repeat for the other Video Head and FM Audio Head.

Fig. M9 Head Cleaning

### Note :

1. Do not rub vertically.
2. Do not apply any pressure to head.  
If contaminant is not easily removed, continued gentle wiping will usually remove the substance.

## 3. ADJUSTMENT PROCEDURES

### 1. REPLACEMENT OF UPPER CYLINDER UNIT

Work with extreme care when removing or replacing the Upper Cylinder Unit. Do not touch Video Heads and FM Audio Heads during servicing.

1. Remove the stator Angle Unit by removing 2 screws (A).

Fig. M10-1

2. Unsolder the 4 Lead wires which are color coded to matching marks (Y,R,T,Y) on the head relay board.
3. Remove the 2 screws(B) and gently lift the RT Rotor Base Unit from the Upper Cylinder Unit.

Color of Lead Wires	mark on head relay board	Color of Lead Wires	mark on head relay board
RED	R	YELLOW	Y
YELLOW	Y	BROWN	T

Fig. M10-2

4. Unsolder the 8 lead pins on the head relay board which are indicated by the arrows  $\Rightarrow$ .
5. Remove the 2 screws (C) and gently lift the Upper Cylinder Unit from the shaft.

Fig. M10-3 Replacement of Upper Cylinder Unit

6. Before reinstalling a new unit, clean the D.D. Cylinder shaft and the surface that it engages with on the Upper Cylinder with a soft cloth dampened with Freon TF.

Fig. M10-4 Replacement of Upper Cylinder Unit

7. Install new Upper Cylinder Unit carefully so that the 8 lead pins are properly matched to the Head Relay Board.  
For details on the installation position, refer to Fig. M10-5.

**Note :**

Install the 8 lead pins with extreme care so as not to damage them.

Fig. M10-5 Replacement of Upper Cylinder Unit

8. Tighten the 2 screws (C) and resolder the 8 lead pins to the head relay board.
9. Next reinstall the RT Rotor Base Unit by refastening the 2 screws (B).
10. Matching them to their proper marks. Resolder the 4 color coded wires to the head relay board (yellow wires to Y marks, red wire to R mark, brown wire to T mark) as shown in Fig. M10-2.

11. Install the stator Angle Unit with 2 screws(A) as shown Fig. M10-1 and adjust the position of the Stator Angle Unit.
12. Clean the Upper Cylinder with a deerskin swab saturated with Freon TF.

**Note:**

Upon completion of replacement, confirm performance. And if required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".

## 2. POSITION ADJUSTMENT OF STATOR ANGLE UNIT

1. Loosen 2 screws(A).
2. Adjust the position of the stator Angle Unit so that the hole of the stator Angle Unit is centered with RT Rotor Boss.

Fig. M11 Position Adjustment of Stator Angle Unit

## 3. REPLACEMENT OF D.D. CYLINDER UNIT

Work with extreme care when removing or replacing the D.D. Cylinder Unit. Do not touch video heads during servicing.

1. Disconnect connector (P1503) from the Stator Angle Unit.
2. Disconnect 2 connectors (P1501 and P1502) from the D.D. Cylinder Unit.
3. Remove screw (A) and discharge angle unit.
4. Remove the D.D. Cylinder Unit by removing 3 screws (B).

Fig. M12-1 Replacement of D.D. Cylinder Unit

**Note :**

Since there is very little clearance between D.D. Cylinder Unit and chassis, remove the D.D. Cylinder Unit gently and carefully.

5. Remove the Stator Angle Unit, RT Rotor Base Unit, Upper Cylinder Unit from the D.D. Cylinder and reinstall it on new one. To perform this step, refer to "REPLACEMENT OF UPPER CYLINDER UNIT" section.
6. Reinstall the new D.D. Cylinder Unit and connect P1501 and P1502. Reinstall connect P1503 and Discharge Angle Unit.

**Note :**

1. When reinstalling the new D.D. Cylinder Unit, fit the new D.D. Cylinder Unit to the chassis by turning it counterclockwise.

Fig. M12-2 Replacement of D.D. Cylinder Unit

2. Upon completion of replacement, confirm performance.  
If any further maintenance is required, perform "TAPE INTERCHANGEABILITY ADJUSTMENT".

#### 4. CONFIRMATION OF DISCHARGE ANGLE UNIT INSTALLATION POSITION

Check to see if the Discharge Angle Unit is correctly set in a position as close to 1mm as possible to the upper side from the center of the cylinder shaft as shown in Fig. M13.

#### Note :

Never install the Discharge Angle Unit to any position to the lower side from the center of the Cylinder shaft, but always within a maximum of 1mm to the upper side of the center of this shaft.

Fig. M13 Confirmation of Discharge Angle Unit Position

#### 5. ADJUSTMENT OF V-STOPPERS

##### \* Equipment Required:

V-Stopper Adjustment

Fixture .....(VFKS0029)

1. Remove the D.D. Cylinder Unit from chassis. (Stator Angle Unit does not need removal from the D.D. Cylinder Unit.) Refer to "REPLACEMENT OF D.D. CYLINDER UNIT" section.
2. Loosen 4 screws (A) and install the fixture.  
Push the V-stoppers snugly against the pins and tighten the 4 screws (A).

Fig. M14 Adjustment of V-Stoppers

3. Upon completion of the adjustment, simulate loading completion to ensure that posts smoothly fit the V-Stoppers.  
Then reinstall the D.D. Cylinder Unit.

#### 6. POSITION ADJUSTMENT OF TENSION POST

##### \* Equipment Required:

Tension Post Adjustment Plate

.....(VFKS0002)

Fine Adjustment Screwdriver

.....(VFKS0136)

1. Remove the Top Case and Front Panel.
2. Put the Cassette Holder in down position without a cassette tape, referring to the procedures in 2-3-1 on page 2-3.
3. Push the play button for loading.

4. As soon as loading is completed, disconnect the AC plug and remove the Cassette Up Unit.
5. Loosen the screw slightly so that the tension band bracket can be moved in accordance with the procedure in item 7, but does not move when the screw driver is removed.
6. Place the adjustment plate.
7. Insert the fine adjustment screwdriver into the hole and move the tension band bracket right or left so that the tension post just touches the fixture.
8. Remove the adjustment plate and tighten the screw.
9. Replace the adjustment plate. Confirm that the tension post just touches the fixture.
10. Remove the jumper.

Fig. M15 Adj. of Tension Post

## 7. MEASUREMENT AND ADJUSTMENT OF BACK TENSION

### A: Measurement Procedure

#### \* Equipment Required:

Back Tension Meter (Tentelometer, Model T2-H7-UM, Purchase Locally)  
VHS Cassette Tape (120 Minute Tape)

#### \* Specification: 25 - 30g

1. Remove the Top Case.
2. Pull the erase head in the direction indicated by the arrow and hold it with adhesive tape.

3. Playback the cassette tape from its beginning and wait until tape running has stabilized. (for approx. 10 to 20 seconds)
4. Insert Tension Meter in tape path and confirm reading.
5. If the reading is out of specification, perform the adjustment procedure.

Fig. M16 Measurement of Back Tension

#### Note :

1. Make sure that the three probes of the meter are all in solid contact with tape, but out of contact with any other parts while measuring.
2. It is recommended that measurements be taken three times as tension meter is very sensitive.

### B: Adjustment Procedure

#### \* Equipment Required:

Fine Adjustment Screwdriver...(VFK0136)

1. Loosen screw (A) and insert the fine adjustment screwdriver into the hole (B).
2. Move the adjustment plate either direction as indicated by the arrow to obtain the specified tension. Turn the driver clockwise to loosen tension, counterclockwise to tighten tension.

3. Tighten screw (A) and verify tension with the meter once again.
4. Reinstall the cabinet parts.

Fig. M17 Adj. of Back Tension

**Note :**

Upon completion of adjustment, remove the adhesive tape holding the erase head.

## 8. CONFIRMATION OF BRAKE TORQUE

### A : Confirmation Procedure

**\* Equipment Required:**

Dial Torque Gauge.....(VFK0133)  
Adaptor for Gauge.....(VFK0134)

1. Remove the Top Case.
2. Put the Cassette Holder in Down position without a cassette tape, referring to the procedures in 2-3-1 on page 2-3.
3. Attach the adaptor to the torque gauge and place the deck in STOP mode.
4. Place the torque gauge on the reel table. The weight of gauge should not rest on the reel table.

Fig. M18-1 Confirmation of Brake Torque

5. Turn torque gauge in either direction indicated in the Fig.M18-2 and read the gauge when the brake begins slipping.

**Note:**

If proper brake torque can not be obtained, clean the rotating surface of reel table with a soft cloth and recheck torque before replacing brakes.

	A	B
Takeup	more than 450g.cm	50 - 125g.cm
Supply		

Fig. M18-2 Confirmation of Brake Torque

## 9. CONFIRMATION OF TAKEUP TORQUE

**\* Equipment Required:**

Dial Torque Gauge.....(VFK0133)  
Adaptor for Gauge.....(VFK0134)

**\* Specifications:**

in PLAY mode .....100 - 180g.cm  
in F.F. mode .....more than 400g.cm  
in REW mode .....more than 400g.cm

1. Attach the adaptor to the torque gauge.
2. Remove the Top Case and Bottom plate.
3. Put the Cassette Holder in Down position without a cassette tape, referring to the procedures in 2-3-1 on page 2-3.
4. Place the torque gauge on the takeup reel table, push the Play button and read torque on the gauge.  
Repeat above procedures in F.F. mode after pushing the F.F. button.

**Note:**

While measuring, the weight of the gauge should not rest on the reel table.

5. Set the torque gauge on the supply reel table, press the rewind button to check REW mode torque.
6. Remove the jumper.

Fig. M19 Confirmation of Takeup Torque

#### 10. POSITION ADJUSTMENT OF SAFETY TAB SWITCH

- \* Equipment Required:  
Cassette Holder Fixture .....(VFKS0004)

1. Remove the Top Case, Front Panel, and Cassette Up Unit.
2. Slightly loosen the screws (A) and (B).
3. Place the fixture in place over the reel tables.
4. Adjust the Safety Switch Angle either forward or backward until the Safety Tab Switch closes and Safety Tab Switch just turns ON. Tighten Screws (A) and (B).

Fig. M20-1 Position Adjustment of Safety Tab Switch-(1)

#### Note:

1. Don't adjust with upward switch lever.
2. Confirm that the Safety Switch correctly turns ON and OFF using video cassette tapes with and without the Safety Tab.

Fig. M20-2 Position Adjustment of Safety Tab Switch-(2)

#### 11. HEIGHT ADJUSTMENT OF REEL TABLES

- \* Equipment Required:  
Post Adjustment Plate .....(VFKS0010)  
Reel Table Height Fixture ..(VFKS0009)

- \* Specification .....0 (+- 0.1)mm

1. Remove the Top Case, Front Panel, and Cassette Up Unit.
2. Place the post adjustment plate over the reels, and put the fixture on it. Set the fixture to zero "0" making sure that the scraper of fixture touches the cut-out portion of the plate.

Fig. M21-1 Adj. of Reel Table Height

3. Then measure the top portion of reel table and confirm the difference against the result of the measurement taken in the above step. Do same for the other reel table.

Fig. M21-2 Adj. of Reel Table Height

4. If the difference is more than 0.1mm (higher or lower), adjust the height of reel table to obtain the specified height.
5. For adjustment, change the poly slider washer located under the reel table. (The washer is available in sizes of varying thickness,  $t=0.13\text{mm}$ ,  $0.25\text{mm}$  and  $0.5\text{mm}$ .)

## 12. HEIGHT ADJUSTMENT OF TAPE GUIDE POSTS

### \* Equipment Required:

Lock Screw Wrench .....(VFKS0032)  
 Post Adjustment Plate .....(VFKS0010)  
 Reel Table Height Fixture ..(VFKS0009)  
 Nut Driver .....(Purchase Locally)  
 Post Adjustment Screwdriver  
 .....(VFK0137)

1. Remove the Top Case, Front Panel and Cassette Up Unit. Place the Adjustment Plate.

Fig. M22-1 Adj. of Tape Guide Post Height

2. First lower all posts so that the condition of height becomes as shown below.

(Lower end of post and tape guide should be lower than scraper.  
 Loosen lock screw located at lower portion of posts (P2 & P3) by Lock Screw Wrench, then turn the posts with post adjustment screwdriver.)

Fig. M22-2 Adj. of Tape Guide Post Height

3. Place the fixture on the Adjustment Plate and fit the scraper to the Adjustment Plate as shown in Fig. M22-2. (The scraper of the fixture should be fully lowered till it touches plate.)
4. Set the fixture to zero "0" and slowly raise the post until it just touches the scraper. When the scraper touches the post, it should fit as shown below in Fig. M22-3 (b).  
 For adjustment of P1 and P4, use the nut driver.  
 (The post cap on P4 can be removed by turning counterclockwise.)  
 For adjustment of P2 and P3, use the post adjustment screwdriver.

Fig. M22-3 Adj. of Tape Guide Post Height

**Note:**

Upon completion of adjustment, tighten lock screws on the P2 and P3 by Lock Screw Wrench and also install the post cap on post 4. When the post cap on P4 is reinstalled, the position of it should be as shown below when viewed from the direction indicated by the arrow.

Fig. M22-4 Installation of Post Cap

### 13. HEIGHT ADJUSTMENT OF P5 ARM UNIT

**Note:**

1. The adjustment should be performed after the adjustment of P4 as the spec. is based on height of P4.
2. The adjustment should be performed in the loading completion mode.

**\* Equipment Required:**

Post Adjustment Plate .....(VFKS0010)  
 Reel Table Height Fixture ..(VFKS0009)  
 Nut Driver (5.5mm) ..Purchase Locally  
 Specification : 0 (+/- 0.05) mm

Fig. M23 Height Adjustment of P5 Arm Unit

1. Put the cassette Holder in down position without a cassette tape referring to the procedures in 2-3-1 on page 2-2.
2. Turn power switch ON, push the play button for loading. Then disconnect the AC plug.
3. First lower the P5 Arm Unit a little lower than the Post Adjustment Plate by turning the nut clockwise.
4. Place the post adjustment plate, put the reel table height fixture on the plate and set the height fixture to zero "0" with condition the foot touches on the height adjustment plate.
5. Slightly raise the post by turning the nut counterclockwise. Place the foot to the post as shown in Fig. M23.
6. Then slowly turn the nut till the fixture reads the specified height.
7. Reinstall the Cassette Up Unit and remove the jumper and plug in for unloading.

### 14. TAPE INTERCHANGEABILITY ADJUSTMENT (FINAL ADJUSTMENT)

**Note:**

To perform these adjustment/confirmation procedures, make sure that the tracking control is set in the detent (fixed) position.

**\* Equipment Required:**

Alignment Tape .....(VFMS0001H6)  
 Post Adjustment  
 Screwdriver .....(VFK0137)  
 H-Position Adujstment  
 Screwdriver .....(VFKS0003)  
 Lock Screw Wrench .....(VFKS0032)  
 Nut Driver (8mm).....Purchase Locally  
 Oscilloscope

#### 14-A. CONFIRMATION OF TAPE TRAVEL

1. Playback a cassette tape and confirm that the tape travels without curling at the edges of the tape.

Fig. M24 Confirmation of Tape Travel

2. If curling is apparent, adjust the height of posts by turning the top of post with the post adjustment screwdriver. (for P2 & P3)

Note:

Before turning P2 and P3, slightly loosen a lock screw by the Lock Screw Wrench.

#### 14-B. CONFIRMATION OF A/C HEAD HEIGHT

This confirmation is required when the A/C Head was replaced and for preliminary height adjustment. For final adjustments, perform item 14-C, 14-D.

1. Looking at the lower edge of the control head with the tape running, ensure that the lower edge of the tape runs along the lower edge of the control head. If it doesn't, slightly turn the nut (A) in either direction to correct. Clockwise to lower the head and counterclockwise to raise it.

Fig. M25 Confirmation of A/C Head Height

#### 14-C. CONFIRMATION OF TILT OF A/C HEAD

This procedure should be performed after the height adjustment of P4.

1. Playback the tape and confirm that the tape runs between lower and top limits of P4 post. Also confirm that the tape is running smoothly.
2. If adjustment is required, turn Screw (C) clockwise until curling is apparent at lower edge of P4. Then turn screw (C) counterclockwise until the curling is smoothed out.

Fig. M26 Confirmation of A/C Head Tilt

#### 14-D. HEIGHT AND AZIMUTH ADJUSTMENT OF A/C HEAD

1. Connect the oscilloscope CH1 to the Audio Output (Left) and CH2 to the Audio Output (Right) on the rear panel.
2. Playback the color bar portion (3kHz, Stereo) of the alignment tape (VFMS 0001H6).
3. Adjust the screw (B) so that the CH2 Audio Output (Right) is maximized.

Fig. M27-1 Height and Azimuth Adjustment of A/C Head

- Then, adjust the nut (A) so that the CH2 Audio Output (Right) is Maximized.

Fig. M27-2 Height and Azimuth Adjustment of A/C Head

- Playback the monoscope portion (6KHz, Monaural) of the alignment tape (VFMS 0001H6).
- Then, adjust the screw (B) so that the phases of both channels match as shown in Fig. M27-3.

Fig. M27-3 Height and Azimuth Adjustment of A/C Head

**Note:**

During this adjustment, the audio output level should be maximum.

**14-E. HORIZONTAL POSITION ADJUSTMENT OF A/C HEAD**

- Set the tracking control to the detent (fixed) point. Connect the oscilloscope CH1 to TP3005 on the Signal Process Section and CH2 to TP2003 on the Servo Section.

Fig. M28 Horizontal Position Adjustment of A/C Head-(1)

- Playback the monoscope portion of the alignment tape (VFMS0001H6) and note the envelope which corresponds to the high period of the Head Switching Signal at TP2003 as shown in Fig. M29. Once note, use only this envelope for the subsequent Adjustments.
- Slowly turn the Adjustment Nut so that the envelope is at maximum. Before finding the center of the maximum period of envelope, rotate the adjustment nut back and forth slightly to confirm the limits on either side of the maximum period. Next determine the center point.
- Confirmation of the correct adjustment can be made by turning the tracking control to the right and the left to check the symmetry of the envelope. If the envelope changes symmetrically, the adjustment has been done correctly.

Fig. M29 Horizontal Position Adjustment of A/C Head-(2)

Fig. M30 Horizontal Position Adjustment of A/C Head-(3)

#### 14-F. CONFIRMATION ADJUSTMENT OF ENVELOPE OUTPUT

1. Set the tracking control in the detent (fixed) position. Connect the oscilloscope to the TP3005 on Signal Process Section. Use TP3006 as a trigger.
2. Playback the monoscope portion of the alignment tape (VFMS0001H6) and adjust the height of posts P2 and P3 watching the scope display so that the envelope becomes as flat as possible.  
 $(V1/V_{\text{max}} \geq 0.7, V2/V_{\text{max}} \geq 0.8)$   
 If adjustment is required, turn top of post with post adjustment screw-driver. For adjustment of P2 & P3, refer to step 2 of item 14-A.

Fig. M31-1 Spec. of Envelope Figure

3. When the scope display is as follows, adjust the height of P2 so that the waveform looks like Fig. M31-4.

Fig. M31-2 Envelope Figure

4. When the scope display is as follows, adjust the height of P3 so that the waveform looks like Fig. M31-4.

Fig. M31-3 Envelope Figure

5. The scope display should appear as shown below when P2 and P3 are adjusted correctly.

Fig. M31-4 Envelope Figure

#### Note:

Upon completion of adjustment of P2 and P3, confirm the Horizontal Position by turning the tracking control clockwise or counterclockwise. And if required, perform "Horizontal Position Adjustment of A/C Head".

## 15. ADJUSTMENT OF FG HEAD GAP

### \*Equipment Required:

Fine Adjustment Screwdriver...VFK0136

\*Specification: 0.16 (+/- 0.02) mm

1. Remove 2 screws (A) on the thrust Holder, then remove the Capstan Pulley Unit, 5 screws (B) and Capstan Stator Unit.

Fig. M32-1 Adjustment of F.G. Head Gap

2. Slightly loosen the 2 screws (C) and set the fine adjustment screwdriver into the hole (D). Turn screwdriver clockwise until the FG Head touches the rotor and just slightly turn it counterclockwise so that the gap becomes as specified.

Fig. M32-2 Adjustment of F.G. Head Gap

### Note:

1. Do not touch the outside circumference surface of the rotor with any tool, and keep any magnetizable material away from the rotor magnet.
2. When reinstalling the Capstan Stator Unit, the circumference of the hole in the Capstan Stator Unit must be centered with the circumference of the Rotor Boss.

Fig. M32-3 Adjustment of F.G. Head Gap

## 16. CONFIRMATION/ADJUSTMENT OF THRUST GAP

### \* Equipment Required:

Reel Table Height Fixture...(VFKS0009)

\* Specification: 0.05 - 0.09mm

1. Place the Unit upside down and place the height fixture on the thrust Holder. Set the fixture to zero "0".
2. Next, push the capstan shaft by your finger, and confirm the thrust gap.
3. If the gap is out of specification, then adjust the thrust screw by turning it clockwise or counterclockwise.

Fig. M33-1 Confirmation/Adjustment of Thrust Gap

**Note:**

Upon completion of above procedure, adjust the capstan seal so that this seal is out of contact with the pressure roller and capstan holder. The specification of clearance is approx. 0.5 (+/- 0.2)mm.

Fig. M33-2 Adjustment of Capstan Seal

## 17. ADJUSTMENT OF CAM GEAR AND MODE SELECT SWITCH

**General Condition:**

The mechanism of this model is mostly engaged to the electrical circuit, System Control Circuit, through the mode select switch. Therefore the relation between the mode select switch and the cam gear determines all further mechanical movement of the mechanical parts such as levers, gears, rollers and so on. If the adjustment of this item is performed improperly, the deck will be unloaded or automatically stopped. It will also result in damage to mechanical and electrical parts.

**Note:**

Step 7 of this procedure describes the necessary adjustment if the mode select switch is replaced.

**Adjustment Procedures:**

This procedure starts with the condition that the Cassette Lock Unit, Kick Base Unit, Sector Gear, Cam Gear and Driving Gear have been removed.

1. Turn loading gear clockwise until post 2 and 3 are fully unloaded. The small projection on the loading gear will be pointing up in the unloaded condition.

Fig. M34-1 Adj. Procedure

2. Install the driving gear so that the hole on the driving gear aligns with the projection on the loading gear. Ensure that the loading gear is still in the fully unloaded condition. Install the C-Ring to mount driving gear.

3. Slowly slide the main rod so that the hole (B) of the main rod meets the hole (C) of chassis. This will simulate stop mode (unloading completion) of main rod and mode select switch.

Fig. M34-2 Adj. Procedure

4. Insert the cam gear with the simple slot side showing so that the hole (A) on the gear meets the hole (B) on the main rod and hole (C) on the chassis. To facilitate matching the three holes, use the small hex wrench or a metal pin. Then install the C-Ring to mount cam gear.

Fig. M34-3 Adj. Procedure

5. Install the sector gear so that the pin on the sector gear meets the inner slot of the cam gear as shown in Fig. M34-4. Also install C-Ring in order to mount sector gear.

Fig. M34-4 Adj. Procedure

6. Completed adjustments should appear as illustrated below.

Fig. M34-5 Adj. Procedure

7. (Adjustment of Mode Select Switch) Keep the main rod in the unloading completion condition so that the hole (A) cam gear, hole (B) of main rod and the hole (C) of chassis are aligned. Upon completion, ensure that the movement of the deck is normal. Place the Mode Select Switch so that the movable projection(A) on Mode Select Switch fits around the tab on the main rod, enclosing it.

Slowly slide the Mode Select Switch sideways until the V-notches in movable Projection and V-notch on the Mode Select Switch are aligned. Tighten two screws (C) to secure alignment.

Fig. M34-6 Adj. of Mode Select Switch

Fig. M34-7 Adj. of Mode Select Switch

8. Turn the Pulley gear in both directions to confirm smooth movement of this mechanism.
9. Install the Cassette Lock Unit and Kick Base Unit.

## 18. ADJUSTMENT OF CASSETTE UP GEARS

1. Remove the Cassette Up Unit according to removal procedure of Cassette Up Unit.
2. Set Cassette Up Unit in full cassette Up condition.

Full Cassette Up Condition :

- (a). Turn the Cassette Loading Motor by hand to the Cassette Up Condition.
- (b). Then remove the worm wheel stopper. Confirm that the wiper gear arm Unit (R) is on the full left side of its arc and cassette holder is in full up condition as shown in Fig. M35.

Fig. M35 Cassette Up Condition

Note:

All the following procedures for adjustment and part replacement should be performed with Cassette Up Unit in full Cassette Up Condition.

### 18-A. RIGHT SIDE GEARS

This procedure starts with the condition that the switch Angle Unit, worm wheel unit, wiper Gear arm Unit (R) and Main Shaft Gear (R) have been removed.

Fig. M36-1 Adjustment of Cassette Up Gears-(1)

Fig. M36-2 Adjustment of Cassette Up Gears-(2)

2. Install the wiper gear arm (R) unit so that the projection (A) on the wiper gear arm (R) unit and the Projection (B) on the Main shaft Gear (R) are aligned. Pin of Cassette Holder-R should fit into the slot of wiper gear arm (R).

Fig. M36-3 Adjustment of Cassette Up Gears-(3)

3. Install the worm wheel unit so that the tooth (E) beside the projection (C) on the worm wheel unit and the valley (F) on the Main Shaft Gear opposite the shorter projection (D) on the Main shaft Gear should be aligned as shown in Fig. M36-4.

Fig. M36-4 Adjustment of Cassette Up Gears-(4)

4. Install worm wheel stopper unit and support angle with 3 screws (A) as shown in Fig. M36-5.

Fig. M36-5 Adjustment of Cassette Up Gears-(5)

5. Install the Switch Angle Unit with screw and 3 Locking tabs as shown in Fig. M36-6.

Fig. M36-6 Adjustment of Cassette Up Gears-(6)

### 18-B. LEFT SIDE GEARS

This procedure starts with the condition that the Cassette Compartment Opener Lever, wiper Gear (L) and Main Shaft (L) Unit have been removed.

Fig. M36-7 Adjustment of Cassette Up Gears-(7)

1. Install the Main shaft Gear (L) Unit.

Fig. M36-8 Adjustment of Cassette Up Gears-(8)

2. Install the wiper Gear (L) unit so that the projection (E) on the wiper Gear (L) unit meets the projection (F) on the Main Shaft Gear (L) Unit. At that time, Pin of Cassette holder-L should fit into the slot of wiper Gear (L). Then install the screw (B).

Fig. M36-9 Adjustment of Cassette Up Gears-(9)

3. Install the cassette compartment opener Lever as shown in Fig. M36-10. Ensure a portion of opener lever (G) slides into the opening beside Cassette door. Snap Cassette Compartment opener lever into place over its pin. Pull down on (H) to ensure Cassette door opens.

Fig. M36-10 Adjustment of Cassette Up Gears-(10)

## 19. ADJUSTMENT OF CASSETTE UP/DOWN SWITCH

### \* Equipment Required :

Fine Adjustment Screwdriver ..VFKS0136

1. Confirm that the Cassette Up Unit is in the full cassette up condition and then remove the Cassette Up Unit referring to removal procedure of Cassette Up Unit.
2. Confirm that the projection (F) on the Wiper Arm Gear (R) Unit meets the apex of triangle of Cassette In Switch as shown in Fig. M36-11.
3. Slightly loosen the Screw (A) and insert the adjustment screwdriver into the hole (B).
4. Turn the adjustment screwdriver until projection (G) on the wiper Arm Gear (R) Unit meets the triangle of Cassette Up/Down Switch as shown in Fig. M36-11. Then Confirm the Cassette Up/Down Switch turns ON and tighten screw (A).
5. Connect the connector P1551 on the connection C.B.A. Insert the cassette tape, then confirm cassette up and cassette down movement.

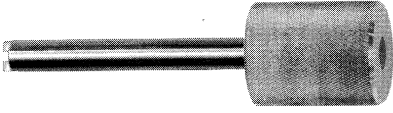

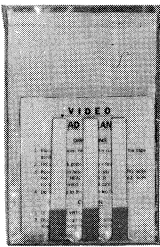

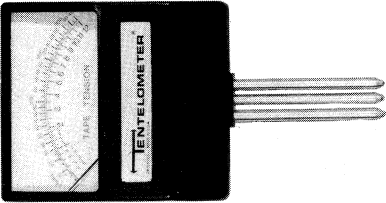

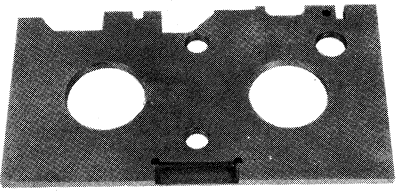

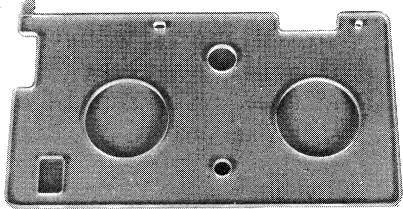

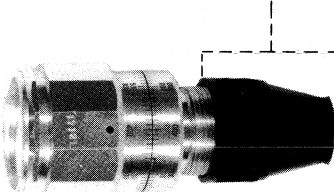

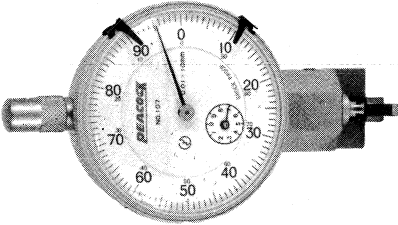

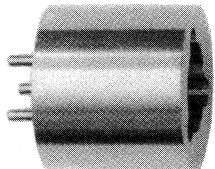

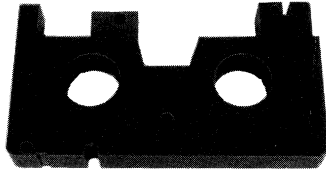

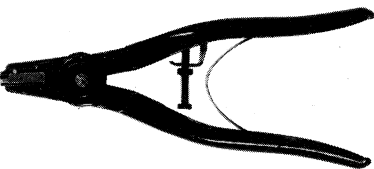

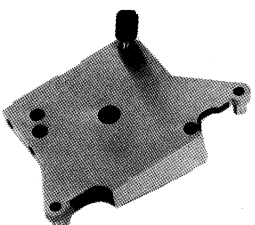

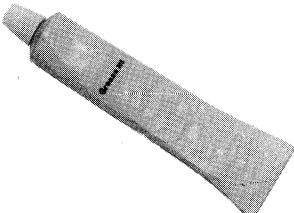

Fig. M36-11 Adjustment of Cassette Up Gears

# ELECTRICAL ADJUSTMENT PROCEDURES

## SERVICE CAUTION

When servicing the Luminance, Chrominance C.B.A.s and the TV Demodulator Unit, take notice of following items.

### A. Luminance and Chrominance C.B.A.s

Do not bend or spread apart the Luminance and Chrominance C.B.A.s. By doing so, damage to the Signal Process C.B.A. or pins on the C.B.A.s may result.

### B. Adjustment on these C.B.A.s and TV Demodulator Unit

Adjustment can be performed without removing these C.B.A.s or the TV Demodulator Unit.

### C. Signal check and Replacement of parts on these C.B.A. and the TV Demodulator Unit.

1. Remove TV Demodulator or one of these C.B.A.s, then insert the Lead Pins and solder on the foil side of Signal Process C.B.A. as shown in (A) in figure.
2. Solder the TV Demodulator Unit or the extracted C.B.A. at the Pins on the Signal Process C.B.A. as shown in (B) in figure.  
Ensure that the pins numbers are aligned with their respective PC Board Pin locations.
3. Perform the signal check or replace parts.
4. After completion, restore to the original assembled condition.

#### NOTE:

When troubleshooting the Luminance or Chrominance C.B.A. and soldering to the foil side of Signal Process C.B.A., remove the metal P.C.Board angle.

## 1. TEST EQUIPMENT

To perform the electrical adjustments completely, the following equipment is required.

1. DVM (Digital Volt Meter)  
Voltage Range : 0.001 - 50V
2. Dual-trace Oscilloscope  
Voltage Range : 0.001 - 50V/Div.  
Frequency Range : DC - 15MHz  
Probes : 10:1, 1:1
3. Frequency Counter  
Frequency Range : 0 - 150MHz
4. Signal Generator  
Sinewave : 0 - 10MHz
5. AC Millivolt Meter  
Voltage Range : 0 - 0.3mVrms  
: 0 - 3mVrms
6. Tuning Amp.
7. VIF Sweep Generator/Trap Adjuster
8. Spectrum Analyzer
9. NTSC Video Pattern Generator
10. DC Power Supply Unit  
Voltage : 0 - 15V DC
11. Variable Attenuater  
Attenuate : (+- 0) dB - -50dB
12. Monitor Scope
13. Color TV Receiver or Monitor
14. V-Hold ADJ. Tool (VFKS0031)
15. Plastic Tip Driver and Non-Metal Driver
16. Lock Screw Wrench (VFKS0032)
17. Isolation Transformer
18. VHS Alignment Tape (VFMS0001H6)

Fig. E1

## 2. ADJUSTMENT PROCEDURES

These adjustment procedures consist of the following sections.

1. Servo Section
2. Audio Section
3. Luminance and Chrominance Section
4. System Control Section
5. TV Demodulator Section
6. IR Wireless Receiving Detector Section

### 2-1. SERVO SECTION

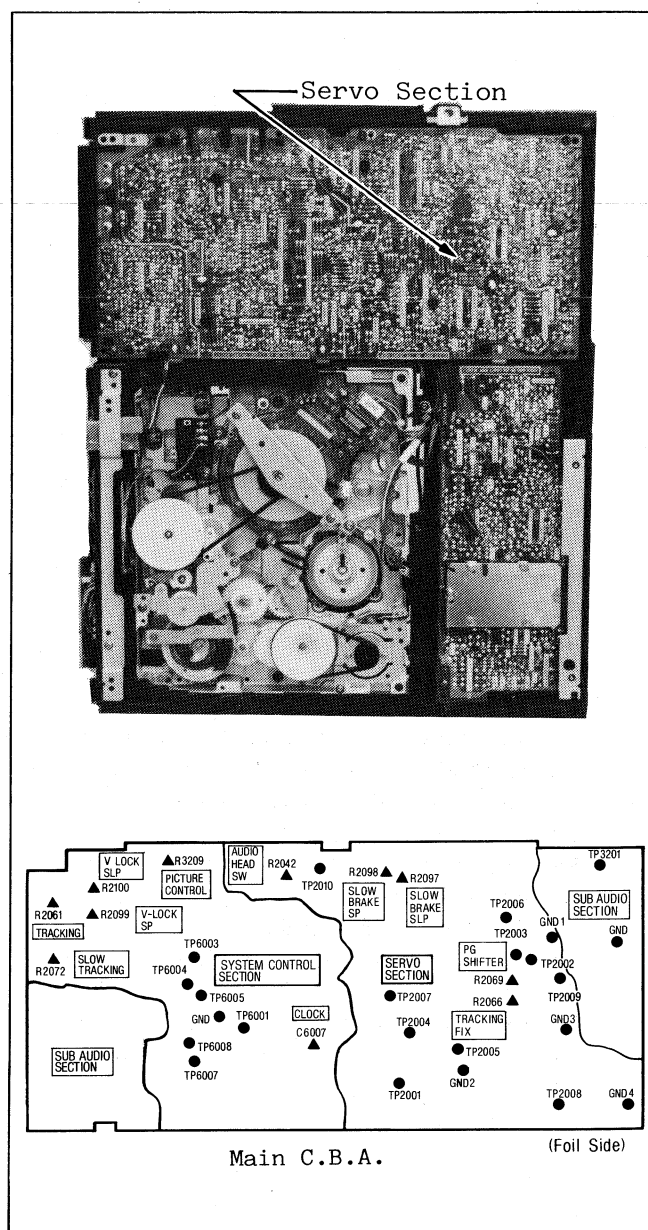

Fig. E2

### 2-1-1. HEAD SWITCHING POSITION ADJUSTMENT

Test Points : TP2003, TP3201  
Adjustment : R2069 (PG SHIFTER)

1. Playback color bar section of the alignment tape.
2. Connect the scope CH 1 to TP3201 on the Sub Audio Section and CH 2 to TP2003 on the Servo Section. Set the scope to the CHOP mode.
3. Also set the scope to the Delay mode or expand the vertical interval of the signal from TP3201.
4. Adjust the PG SHIFTER (R2069) so that the head switching point is  $6 (+/- 1)$  H before the start of vertical sync as shown below.

Fig. E3 TP3201 0.5V/0.1msec. div.  
TP2003 5V/0.1msec. div.

5. Change the slope selector on the scope from "+" to "-" and make sure that the other switching point is also  $6 (+/- 1) H$  before the beginning of vertical sync.

### 2-1-2. TRACKING FIX ADJUSTMENT

Test Points : TP2002, TP2003  
Adjustment : R2066 (TRACKING FIX)

1. Supply a video signal to the Video Input on the rear panel or tune in a local TV program.
2. Set the Tracking Control on the front panel to the center detent point.
3. Insert a cassette tape and make a recording in the SP mode for a few minutes.
4. Playback the portion just recorded.
5. Connect the scope CH 1 to TP2003 and CH 2 to TP2002 on the Servo Section.
6. Adjust the TRACKING FIX (R2066) so that the is  $7.3 (+/- 0.4)$  msec.

Fig. E4 TP2003 5V/2msec. div.  
TP2002 1V/2msec. div.

### 2-1-3. SLOW BRAKE ADJUSTMENT

Test Points : TP2006, TP2007  
Adjustments : R2098 (SLOW BRAKE-SP)  
R2097 (SLOW BRAKE-SLP)

1. Supply a video signal to the video Input on the rear panel or tune in a local TV program.
2. Insert a cassette tape and make a recording in the SP mode for a few minutes.
3. Playback the portion just recorded.
4. Press the Slow/FA key on the front panel.
5. Connect the scope CH 1 to TP2007 and CH 2 to TP2006 on the Servo Section. Set the scope to the CHOP mode.
6. Adjust the SLOW BRAKE-SP (R2098) so that the A-portion is as shown below.

Fig. E5 TP2007 0.2V/10msec. div.  
TP2006 0.5V/10msec. div.

7. In case of misadjustment, A-portion is as shown in Fig. E6.

Fig. E6

8. Then, change to SLP and make a recording for a few minutes.
9. Playback the portion just recorded.
10. Press the Slow/FA key on the front panel.
11. Adjust the Slow BRAKE SLP (R2097) same as in the SP mode.

#### 2-1-4. V LOCK ADJUSTMENT

Equipment : TV Monitor

Adjustments: R2100 (V-LOCK-SLP)  
R2099 (V-LOCK-SP)

1. Supply a color bar signal to the Video Input on the rear panel or tune in a local TV program.
2. Insert a cassette tape and make a recording in the SLP mode for a few minutes.
3. Playback the portion just recorded.
4. Set the slow tracking VR on the front panel to the center detent point.
5. Push the PAUSE/STILL key.
6. Adjust the V-LOCK-SLP (R2100) on the System Control Section so that the center of picture is most stable.

Fig. E7

7. Place the unit in SP mode and make a recording for a few minutes.
8. Playback the portion just recorded, and push the PAUSE/STILL key.
9. Adjust the V-LOCK-SP (R2099) on the System Control Section so that the center of picture is most stable.

#### 2-1-5. AUDIO HEAD SWITCHING POSITION ADJUSTMENT

Test Points : TP2003, TP2010, TP4202  
Adjustment : R2042 (AUDIO HEAD SW.)

- 
- TP2003
- TP2010
- TA

(Confirmation)

- 
- Audio Head Switching Position
- TP2010
- TP4202

7. If the envelope has the Drop Out (A-portion in Fig. E8-3), adjust the AUDIO HEAD SW. (R2042) so that the audio envelope has no drop out portion as shown in Fig. E8-2.

Fig. E8-3

2-2-1. NORMAL AUDIO SECTION

### Location of Test Points & Adjustment Points

Normal Audio C.B.A.

Fig. E9

### 2-2-1-1. BIAS CURRENT ADJUSTMENT

Test Point : Audio Head Terminal (L, R)  
Adjustment : C4110 (L CH, REC BIAS)  
C4111 (R CH, REC BIAS)

1. Plug in a phono plug to the Audio Input, but do not supply any audio signal to the AUDIO INPUT on the rear panel.
2. Insert a cassette tape and make a recording in the SP mode.
3. Connect the AC Millivolt Meter or scope as shown in Fig. E10.

Fig. E10

4. While the recording is taking place, adjust the L CH REC BIAS (C4110) on the Normal Audio Section so that the voltage is within the specification.
5. Change the connected point of the AC Millivolt Meter or scope as shown in Fig. E11.

Fig. E11

6. During recording, adjust the R CH REC BIAS (C4111) on the Normal Audio Section so that the voltage is within the specification.  
(Specification should be decided by the color of the dot on A/C Head.)

Fig. E12

7. Remove the AC Millivolt Meter or scope.

Note:

For Service replacement, A/C Head without color dot is supplied.

### 2-2-1-2. PLAYBACK GAIN ADJUSTMENT

Test Points : TP4001 (L CH)  
TP4003 (R CH)

Adjustments : R4010 (PB GAIN-L CH)  
R4060 (PB GAIN-R CH)

1. Playback Multi-Burst section (1kHz Audio) of the alignment tape (VFMS0001H6).
2. Connect the scope CH 1 to TP4001 and CH 2 to TP4003 on the Normal Audio Section.
3. Set the DOLBY NR Switch on the front panel to OFF.
4. Set the scope to CH 1 mode and adjust the PB GAIN-L CH (R4010) on the Normal Audio Section so that the level of waveform is 300 ( $\pm 15$ ) mVp-p.

Fig. E13 TP4001 0.1V/1msec. div.

5. Set the scope to CH 2 mode and adjustment PB GAIN-R CH (R4060) on the Normal Audio Section so that the level of waveform is 300 (+/- 15) mVp-p.

#### 2-2-1-3. Recording Gain Adjustment

Test Points : TP4001, TP4003

Adjustments : R4025 (REC LEVEL-L CH)  
R4075 (REC LEVEL-R CH)

(L Channel)

1. Connect the Signal Generator to AUDIO IN (L) jack on the rear panel.
2. Supply a sinewave signal (1KHz, -10dB, 890mVp-p) from the Signal Generator.
3. Set the DOLBY NR Switch on the front panel to OFF.
4. Place the unit in SP recording mode.
5. Connect the scope to TP4001 on the Normal Audio Section and set the recording level at approx. 1.3 Vp-p as a starting point of this adjustment.
6. Playback the portion just recorded and read the level of Playback.
7. Confirm that the Recording level and Playback level are the same level.
8. If the Recording level and Playback level aren't the same. During Recording, turn the REC LEVEL-L (R4025) to slightly increase or decrease the signal level.
9. Repeat above step 4 to 8 until Recording level and Playback level are the same.

(R Channel)

1. Connect the signal Generator to AUDIO IN (R) jack on the rear panel.
2. Supply a sinewave signal (1KHz, -10dB, 890mVp-p) from the Signal Generator.
3. Place the unit in SP recording mode.
4. Connect the scope to TP4003 on the Normal Audio Section and set the recording level at approx. 1.3Vp-p as a starting point of this adjustment.
5. Playback the portion just recorded and read the level of playback.
6. Adjust the REC LEVEL-R (R4075) as is done in L channel adjustment.

#### 2-2-1-4. Overall Frequency Response Adjustment

Test Points : TP4001 (L CH)  
TP4003 (R CH)

Adjustments : R4005 (PB EQ-L CH)  
R4055 (PB EQ-R CH)

1. Supply the color bar signal to the Video Input on the rear panel.
2. Supply a sinewave signal (1KHz and 5KHz, 40dB, 28mVp-p) to either Audio Input L CH or R CH on the rear panel.
3. Connect the AC Millivolt Meter to TP4001 on the Normal Audio Section.
4. Insert a cassette tape and make a recording in SP mode 1KHz first, then 5KHz.
5. Connect the phono plug to Audio Out jack (R CH).
6. Playback the portion just recorded.
7. Adjust PB EQ-L CH (R4005) on the Normal Audio Section so that the 1KHz and 5KHz outputs are balanced.
8. Then, connect the AC Millivolt Meter to TP4003 on the Normal Audio Section.
9. Remove the phono plug from Audio Out jack (R CH), then connect the phono plug to Audio Out jack (L CH).
10. Playback the portion just recorded.
11. Adjust the PB EQ-R CH (R4055) on the Normal Audio Section so that the 5KHz output is 0 (+/- 0.5) dB of 1KHz output.
12. Remove the AC Millivolt Meter and the Phono plug.

## 2-2-2. FM AUDIO SECTION

Fig. E14

When Servicing the FM Audio C.B.A., take notice of following items.

1. Disconnect the AC plug from the AC outlet.

2. Remove the 2 Screws (A), then remove the FM Audio C.B.A. When removing the FM Audio C.B.A., and keeping it tilted up, move it away from the front of the unit to free it.

Fig. E15

3. Remove the Shield Plate on the FM Audio C.B.A. by removing the 3 plastic rivets that secure it to the C.B.A. Then lay the Shield Plate on the Cassette up Unit, underneath the C.B.A. Let the C.B.A. rest on the Shield Plate as shown in Fig. E14.

### 2-2-2-1. CARRIER FREQUENCY AND AUDIO DEVIATION ADJUSTMENT

Test Points: TP4203, TP4206, pin23 of IC4203, pin 23 of IC4210

Adjustments: R4266 (CARRIER FRE-L)  
R4304 (CARRIER FRE-R)  
R4223 (DEVIATION - L)  
R4296 (DEVIATION - R)

A:L-CHANNEL

(A-1, Carrier Frequency Adjustment)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Connect the Phono plug to Audio IN jack (L CH) to complete no signal condition.

3. Place the unit in STOP mode.
4. Connect the frequency counter to TP4203 on the FM Audio Section.
5. Adjust the CARRIER FRE-L (R4266) so that the frequency is 1300 (+- 5) KHz.

#### (A-2, Audio Deviation Adjustment)

6. Connect the DVM to pin 23 of IC4203 on the FM Audio section and read the voltage level.
7. Connect the pin 23 of IC4203 to GND through the resistor and the variable resistor (500k $\Omega$ ) as shown below.

Fig. E16

8. Turn the variable resistor (500k $\Omega$ ) so that the frequency is 1250 (+- 2) KHz. Then read the voltage level at pin 23 of IC4203.
9. Remove the DVM, resistor and the variable resistor.
10. Remove the Phono plug. Then supply a sinewave signal (1KHz, -20dB, 283mVp-p) to Audio IN (L) jack on the rear panel.
11. Connect the AC Millivolt Meter or scope to pin 23 of IC4203.
12. Calculate "A" using the formula below.
13. Adjust the DEVIATION -L (R4223) on the FM Audio Section so that the voltage level is the same as calculated in step 12.

$$\text{AC Millivolt Meter}(V_{\text{rms}}) = \frac{V}{\sqrt{2}} = A$$

V : Voltage difference between step 6 and step 8

#### B:R-CHANNEL

#### (B-1, Carrier Frequency Adjustment)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Connect the Phono plug to Audio IN jack (R CH) to complete no signal condition.

3. Place the unit in STOP mode.
4. Connect the frequency counter to TP4206 on the FM Audio Section.
5. Adjust the CARRIER FRE-R (R4304) so that the frequency is 1700 (+- 5) KHz.

#### (B-2, Audio Deviation Adjustment)

6. Connect the DVM to pin 23 of IC4210 on the FM Audio Section and read the voltage level.
7. Connect the pin 23 of IC4210 to GND through the resistor and the variable resistor as shown Fig. E16.
8. Turn the variable resistor (500k $\Omega$ ) so that the frequency is 1650 (+- 2) KHz. Then read the voltage level at pin 23 of IC4210.
9. Remove the DVM, resistor and the variable resistor.
10. Remove the Phono plug. Then supply a sinewave signal (1KHz, -20dB, 283mVp-p) to Audio IN(R) jack on the rear panel.
11. Connect the AC Millivolt Meter or scope to pin 23 of IC4210.
12. Adjust the DEVIATION-R(R4296) on the FM Audio Section as is done in L channel Adjustment.

#### 2-2-2-2. AUDIO RECORDING CURRENT ADJUSTMENT

Test Points : TP4207, TP4208

Adjustment : R4218 (REC-AUDIO-CURR)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Connect the Phono plug to Audio IN jack (L CH).
3. Insert a cassette tape and make a recording in the SP mode.
4. Connect the scope between TP4207(HOT) and TP4208(GND) on the FM Audio Section.
5. Adjust the A-REC CURR (R4218) on the FM Audio Section so that the level of waveform is 260 (+- 10) mVp-p.

#### 2-2-2-3. TIMING CURRENT ADJUSTMENT

Test Points : TP4204, TP4205

Adjustment : R4335 (TIMING CURR)

1. Set the Input Select Switch on the front panel to LINE mode.

2. Supply a sinewave signal (1KHz, -20dB, 283mVp-p) to either Audio Input L CH or R CH on the rear panel.
3. Place the unit in STOP mode.
4. Connect the DC Millivolt Meter between TP4204(HOT) and TP4205(GND) on the FM Audio Section.
5. Adjust the TIMING CURR (R4335) on the FM Audio Section so that the voltage is 15.0 (+- 0.1) mVDC.

#### 2-2-2-4. AUDIO PLAYBACK LEVEL ADJUSTMENT

Test points : Audio out jack (L), (R)  
 Adjustments : R4319 (PB AUDIO LEVEL-L)  
                   R4352 (PB AUDIO LEVEL-R)

(L-channel)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Supply a sinewave signal(1KHz, -20dB, 283mVp-p) to either Audio Input L CH or R CH on the rear panel.
3. Insert a cassette tape and make a recording in the SP mode.
4. Push the HiFi button and L/R button on the front panel.  
 Then, connect the phono plug to the Audio out jack (R) on the rear panel.
5. Connect the scope to Audio out jack(L) on the rear panel and read the level of recording.
6. Playback the portion just recorded and read the level of playback.
7. Adjust the PB AUDIO LEVEL-L(R4319) so that the Recording level and playback level are the same level.

(R-channel)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Supply a sinewave signal (1KHz, -20dB, 283mVp-p) to either Audio Input L CH or R CH on the rear panel.
3. Insert a cassette tape and make a recording in the SP mode.
4. Push the HiFi button and L/R button on the front panel.  
 Then, connect the phono plug to the Audio out jack (L) on the rear panel.
5. Connect the scope to Audio out jack (R) on the rear panel and read the level of recording.
6. Playback the portion just recorded and read the level of playback.
7. Adjust the PB AUDIO LEVEL-R(R4352) so that the Recording level and Playback level are the same level.

#### 2-2-2-5. AUDIO MUTING ADJUSTMENT

Test Point : TP4202

Adjustment : R4240 (AUDIO MUTING)

1. Set the Input Select Switch on the front panel to LINE mode.
2. Connect the Phono plug to Audio IN jack (L CH).
3. Push the HiFi button and L/R button on the front panel.
4. Turn the Tracking Control on the front panel to center detent point.
5. Insert a cassette tape and make a recording in SP mode for a few minutes.
6. Playback the just Recorded portion.
7. Connect the scope to TP4202 on the FM Audio Section.
8. Adjust the Tracking VR so that the amplitude of the signal at TP4202 is reduced to 1/3.
9. First adjust AUDIO MUTING (R4240) until the HiFi indication on the front panel turns OFF.
10. Then slowly adjust AUDIO MUTING (R4240) to the point where the HiFi indication just turns ON.
11. Confirm that the sounds on CH-L and CH-R do not contain abnormal sound.

#### 2-3. LUMINANCE AND CHROMINANCE SECTION

Fig. E17

Fig. E18

Fig. E19

### 2-3-1. E-E LEVEL ADJUSTMENT

Test Point : TP3004

Adjustment : R3114 (E-E LEVEL)

1. Supply an NTSC Color Bar Signal W/White Window (1Vp-p) to the Video Input on the rear panel.
2. Connect the scope to TP3004 on the Signal Process C.B.A.
3. Place the unit in STOP mode.
4. Adjust the E-E LEVEL (R3114) on the Luminance C.B.A. so that the video level is 2.0 (+/- 0.1) Vp-p.

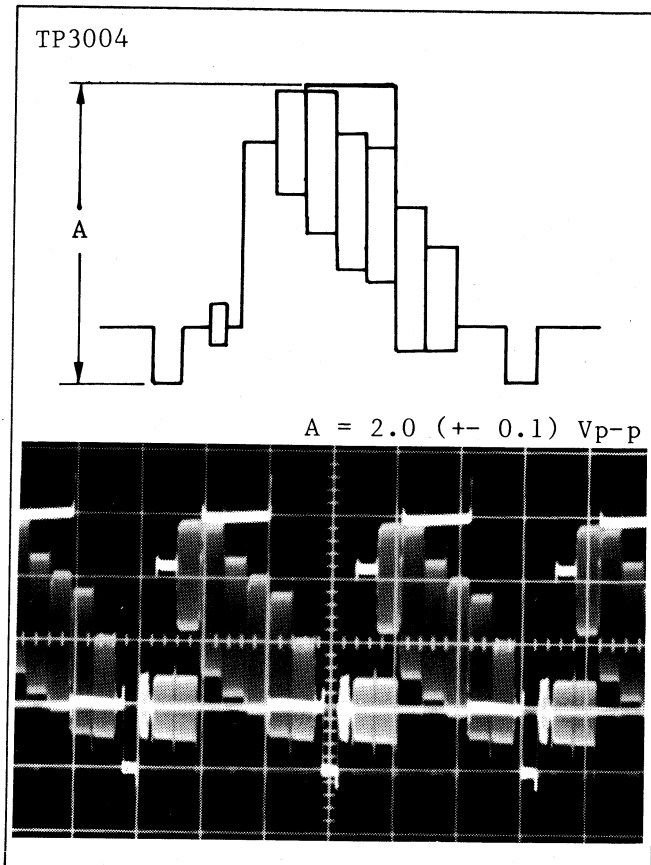

Fig. E20 TP3004 0.5V/20 u-sec. div.

## 2-3-2: SYNC TIP FREQUENCY AND DEVIATION ADJUSTMENT

Test Points : TP3501, TP3504, TP3002

Adjustments : R3103 (SYNC TIP FREQ)  
R3104 (DEVIATION)

### (A-1, Sync Tip Frequency Adjustment)

1. Plug in a phono plug to the Video Input on the rear panel, but do not supply video signal.
2. Connect the frequency counter to TP3002 on the Luminance Signal Process Section.
3. Insert a cassette tape and place the unit in LP REC mode.
4. Adjust the SYNC TIP FREQ (R3103) so that the frequency is 3.4 (+/- 0.04) MHz.
5. Remove the frequency counter.

### (A-2, Deviation Adjustment)

6. Turn the WHITE CLIP (R3101) and the DARK CLIP (R3102) to fully counterclockwise from the component side.
7. Turn the REC VIDEO LEVEL (R3001) to fully counterclockwise and the REC CHROMA (R3016) to fully clockwise from the component side.
8. Connect a signal generator (sinewave) to TP3001 through the resistor (1k $\Omega$ ). Set the frequency and the output level of the signal generator.  
Frequency : 4.35 (+/- 0.04) MHz  
Output Level : 0.1Vp-p

Fig. E21

9. Supply an NTSC Color Bar Signal (1Vp-p) to the Video Input on the rear panel.
10. Connect the scope to TP3501 (HOT) and TP3504 (GND) on the Head Amp Section. Use TP3006 as a trigger.
11. Turn the DEVIATION (R3104) to fully clockwise from the component side. Then slowly adjust the DEVIATION (R3104) so that maximum inner beat is procedure as shown in Fig. E22.

Fig. E22

Fig. E23 TP3501 20mV/2msec. div.

Fig. E24 TP3501 20mV/2msec. div.

Note : Inner beat is used for this adjustment but not outer beat as shown in Fig. E25.

Fig. E25

12. Remove the resistor and a signal generator.
13. Make WHITE and DARK CLIP adjustment and Recording Current adjustment.

#### 2-3-3. WHITE AND DARK CLIP ADJUSTMENT

Test Point : TP3101

Adjustments: R3101 (WHITE CLIP)  
R3102 (DARK CLIP)

1. Supply an NTSC color Bar Signal W/White Window to the Video Input on the rear panel.
2. Connect the scope to TP3101 on the Luminance C.B.A.
3. Place the unit in SP REC mode.
4. Adjust the WHITE CLIP (R3101) and the DARK CLIP (R3102) on the Luminance C.B.A. so that the overshoot and undershoot are as shown in Fig. E26.

Fig. E26 TP3101 0.2V/20 u-sec. div.

#### 2-3-4. RECORDING CURRENT ADJUSTMENT

Test Points : TP3004, TP3006, TP3501, TP3504  
Adjustments : R3001 (REC VIDEO LEVEL)  
R3016 (REC CHROMA LEVEL)

1. Supply an NTSC color Bar Signal W/White Window to the Video Input on the rear panel.
2. Insert a cassette tape and make a recording in the LP mode.
3. Connect the scope between TP3501 (HOT) and TP3504 (GND) on the Head Amp Section.
4. Turn the REC VIDEO LEVEL (R3001) fully counterclockwise from the component side.
5. Set the scope 20mV/div., 10 u-sec/div. Use TP3004 as scope trigger.
6. Adjust the REC CHROMA (R3016) on the Luminance Signal Process Section so that the level of cyan portion is 36 (+- 3) mVp-p.

Fig. E27 TP3501 20mV/10 u-sec. div.

7. Then set the scope 20mV-div., 2msec/div.  
Use TP3006 as scope trigger.
8. Adjust the REC VIDEO LEVEL (R3001) on the Luminance Signal Process Section so that the level of V sync portion is  $110 (+- 3) \text{ mVp-p}$ .

Fig. E28 TP3501 20mV/2msec. div.

### 2-3-5. 320FH VCO ADJUSTMENT

Test Point : TP8103

Adjustment : R8109 (320FH VCO)

1. Place the unit in STOP mode.
2. Connect the test point (TP8105) to Pin 3 of Chrominance C.B.A. through the resistor ( $1\text{k}\Omega$ ) and the diodes (MA165).

Fig. E29

3. Connect the frequency counter to TP8103 on the Chrominance C.B.A.
4. Adjust the 320FH VCO (R8109) from the component side on the Chrominance C.B.A. so that the frequency is  $4.2 (+- 0.1) \text{ MHz}$ .
5. Remove the frequency counter, resistor/diodes.

### 2-3-6. 3.58MHz VXO ADJUSTMENT

Test Point : TP8104

Adjustment : C8111 (3.58MHz VXO)

1. Place the unit in STOP mode.
2. Connect the test point (TP8102) to GND on the Chrominance C.B.A. through the resistor ( $22\text{k}\Omega$ ) and the capacitor ( $0.01 \text{ u-F}$ ).

Fig. E30

3. Connect the frequency counter to TP8104 on the Chrominance C.B.A.

4. Adjust the 3.58MHz VX0 (C8111) from the component side on the Chrominance C.B.A. so that the frequency is 3.579545 MHz (+- 20) Hz.
5. Remove the frequency counter, resistor/capacitor.

#### 2-3-7. COMB FILTER ADJUSTMENT

Test Point: TP3004

Adjustment: R8113 (COMB FILTER)

1. Supply a color bar signal to the Video Input on the rear panel.
2. Insert a cassette tape and make a recording in the SLP mode.
3. Connect the scope to TP3004 on the Luminance Signal Process Section.
4. Playback the portion just recorded.
5. Turn the Tracking Control on the front panel for the poorest tracking. (Worst playback image.)
6. During playback, adjust the COMB FILTER (R8113) on the Chrominance C.B.A. from the component side as shown below.

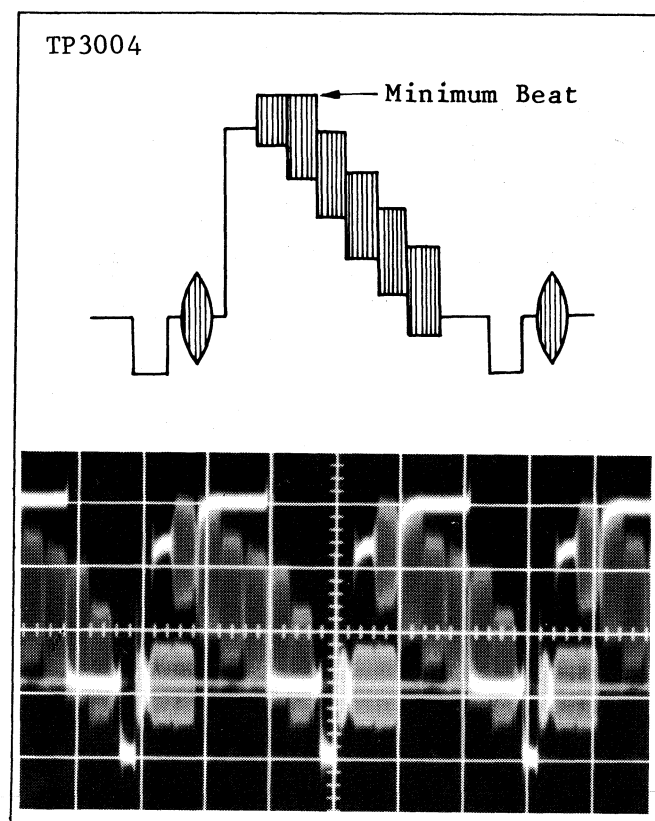

Fig. E31 TP3004 0.5V/20 u-sec. div.

#### 2-3-8. PLAYBACK LEVEL ADJUSTMENT

Test Point: TP3004

Adjustment: R3123 (PB VIDEO LEVEL)

1. Supply an NTSC Color Bar Signal W/White Window (1Vp-p) to the Video Input on the rear panel.
2. Insert a cassette and make a recording in the SP mode for a few minutes.
3. Connect the scope to TP3004 on the Luminance Signal Process Section.
4. Playback the portion just recorded.
5. During playback, adjust the PB VIDEO LEVEL (R3123) on the Luminance C.B.A. so that the video level is 2.0 (+- 0.1) Vp-p.
6. Confirm that the level of cyan portion is 1.26 (+- 0.2) Vp-p.

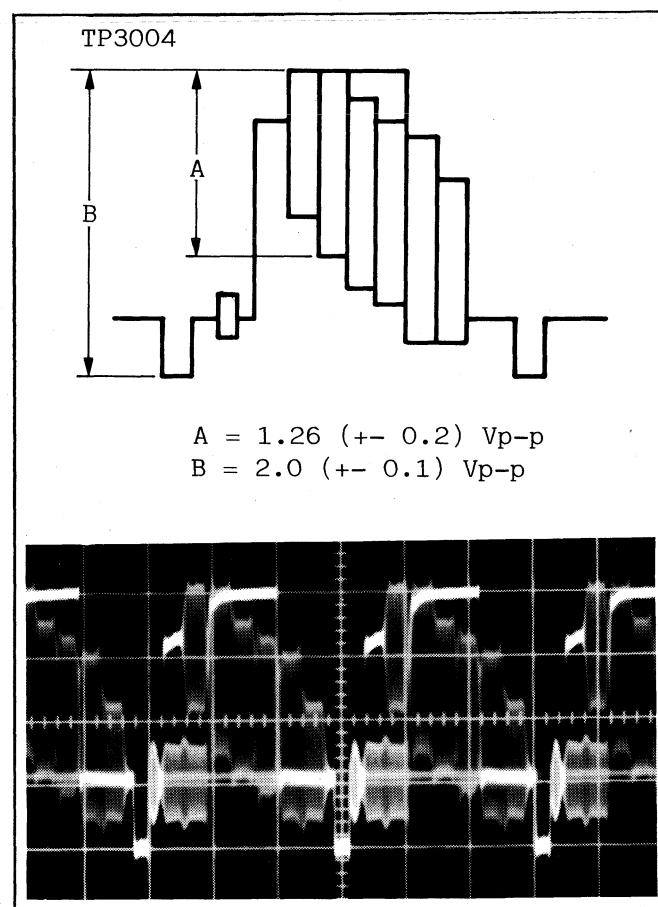

Fig. E32 TP3004 0.5V/20 u-sec. div.

## 2-4. SYSTEM CONTROL SECTION

Fig. E33

### 2-4-1. CLOCK ADJUSTMENT

Test Point: TP6001

Adjustment: C6007 (CLOCK)

1. Connect the frequency counter with 10:1 Probe to TP6001 on the System Control Section.
2. Adjust the CLOCK (C6007) from the component side so that the frequency at TP6001 is 349.525 (+/- 0.001) KHz.
3. Remove the frequency counter.

## 2-5. TV DEMODULATOR SECTION

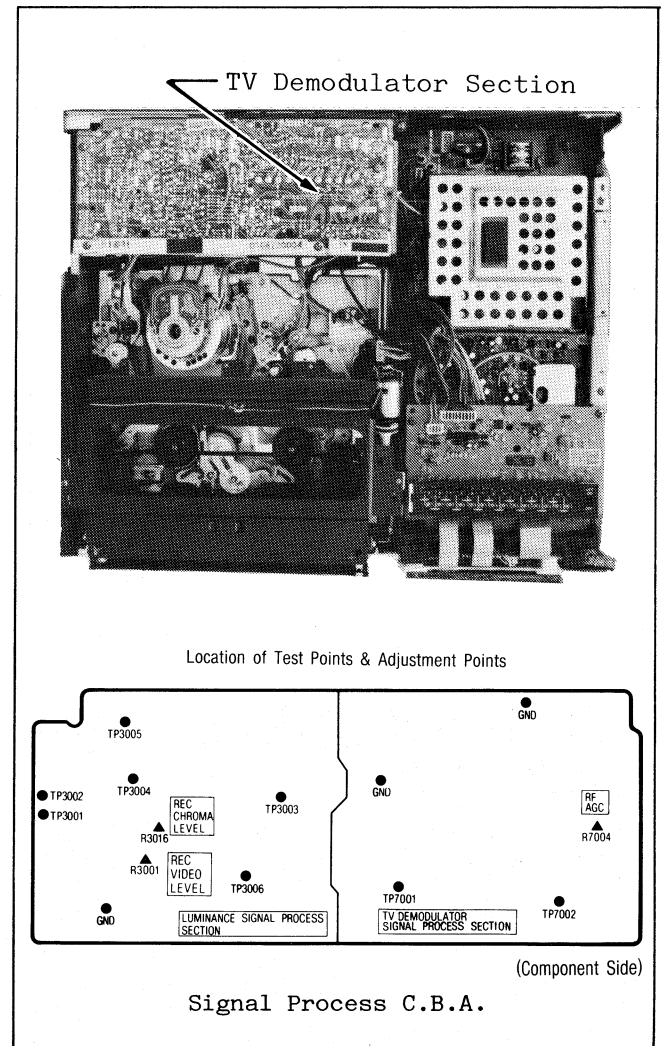

Fig. E34

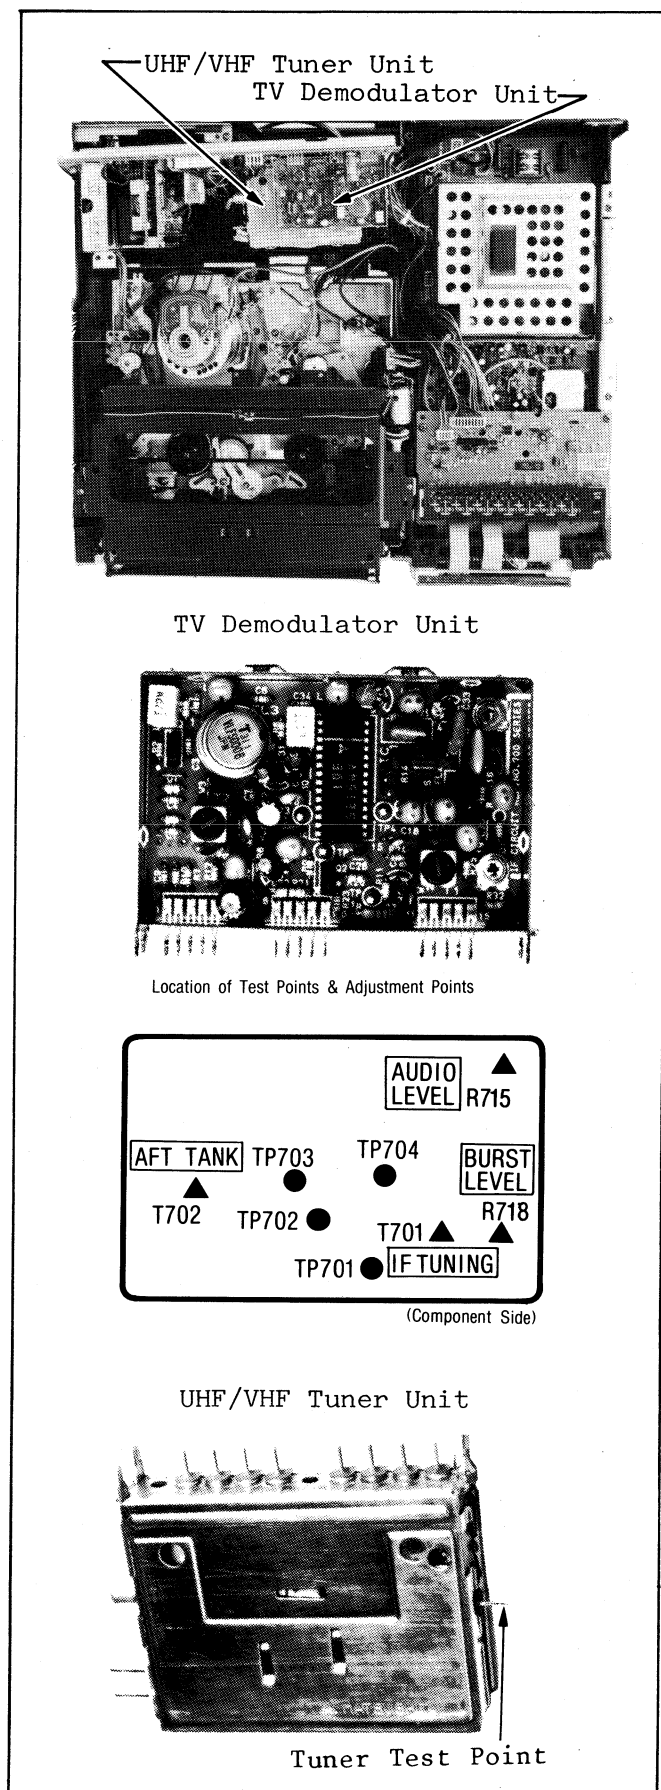

Fig. E35

## 2-5-1. VIF OVERALL CONFIRMATION AND VCO ADJUSTMENT

Test Points : TP703, TP704  
Adjustment : T701 (VCO)

### (CAUTION)

Since the TV Demodulator Unit and UHF/VHF Tuner Unit have already been factory adjusted, do not try to adjust unless absolutely necessary.

A: Factory Adjustment

### A-1. Overall Confirmation of VIF

1. Connect the VIF Sweep Generator/Trap Adjuster and Monitor Scope as shown below.

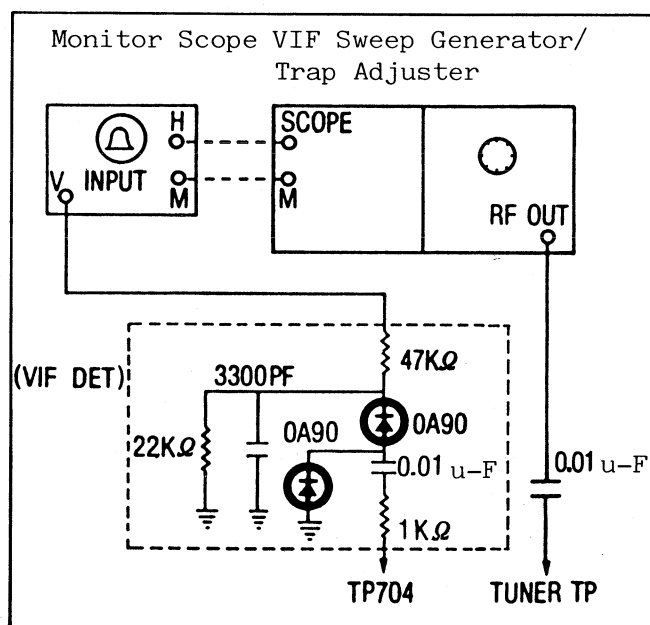

Fig. E36

2. Connect the output of the VIF Sweep Generator to tuner test point on the UHF/VHF Tuner Unit.
3. Connect the V Input of the Monitor Scope to TP704 on the TV Demodulator Unit through VIF Detector.
4. Select Channel 13.
5. Set the AFT switch to "OFF" position.
6. Connect the DC Power Supply Unit to TP701 on the TV Demodulator Unit and set at 0V DC as a starting point.
7. Connect TP702 and GND with a 3.3 u-F /25V capacitor.
8. Adjust the VCO (T701) so that the beat portion is at center as shown in Fig. E37.

Fig. E37

9. Set the DC Power supply voltage on TP701 so that the waveform level is maximum.
10. Adjust the output of the VIF Sweep Generator so that the A level is 1.0Vp-p.

Fig. E38

11. Increase the VIF Sweep Generator output by 25dB.
12. Adjust the output of the DC Power Supply Unit so that the A portion becomes 1.0Vp-p.
13. Confirm that the Sweep output waveform is as shown in Fig. E38.
14. Adjust the VCO (T701) so that the Beat portion is at 45.75MHz marker as shown below.

Fig. E39

15. Remove the capacitor.

#### A-2. VCO Adjustment

1. Adjust DC Power Supply Unit to 0V DC.
2. Connect a 3.3 u-F/25V capacitor between TP702 and GND.
3. Connect the Frequency Counter to TP703 on the TV Demodulator Unit through a Tuning Amp.

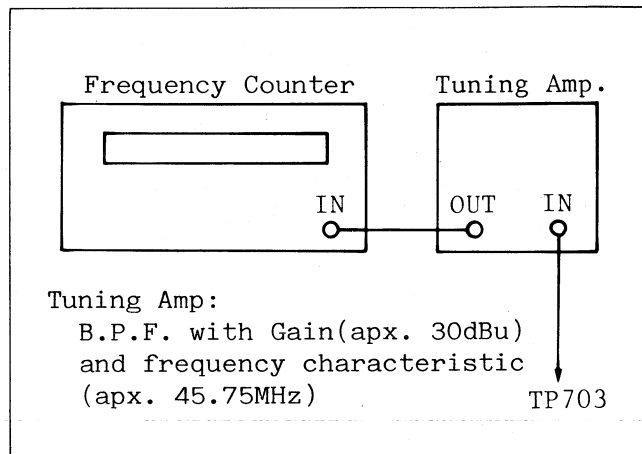

Fig. E40

4. Adjust the VCO (T701) so that the frequency is 45.75MHz (+- 0.02) MHz.
5. Remove the capacitor.

#### B. Field Adjustment

1. Supply the NTSC standard color bar signal to the RF Input on the rear panel and tune this signal.
2. Connect the scope to TP704 on the TV Demodulator Unit.
3. Adjust the VCO (T701) so that the waveform is as shown below.

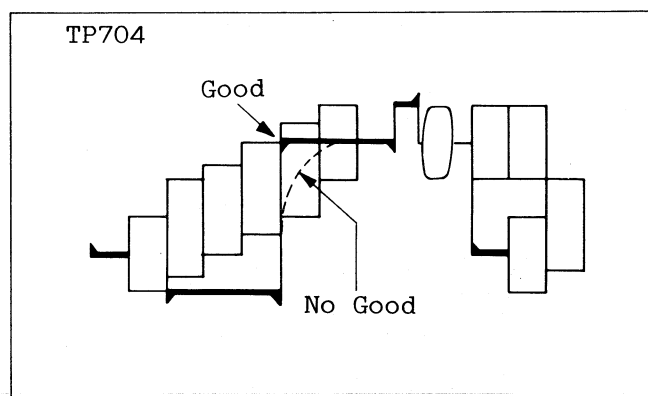

Fig. E41

### 2-5-2. AFT TANK ADJUSTMENT

Test Point: Tuner Test Point (TP)  
Adjustment: T702 (AFT)

1. Tune in a local TV program on Channel 4.
2. Connect the frequency counter to tuner test point on the UHF/VHF Tuner Unit through a 10k $\Omega$  resistor and a 10PF capacitor.

Fig. E42

3. Set the AFT switch on the Tuning Control Unit to "OFF".
4. Adjust the tuning VR on the front panel so that the frequency is 113.00 (+- 0.01) MHz.
5. Set the AFT switch on the tuning Control Unit to "ON".
6. Adjust the AFT (T702) so that the frequency is 113.00 (+- 0.005) MHz.
7. Remove the frequency counter.

### 2-5-3. BURST LEVEL ADJUSTMENT

Test Point : Pin 10 of TV Demodulator Unit  
Adjustment : R718 (BURST LEVEL)

1. Supply the NTSC standard color bar signal to the RF Input on the rear panel and tune to this signal.
2. Connect the scope to Pin 10 of TV Demodulator Unit.
3. Confirm that the video level at Pin 10 of TV Demodulator Unit is 1.0 (+- 0.2) Vp-p.
4. Adjust the BURST LEVEL (R718) so that the burst level is 22 (+- 1) % of the video level.
5. Confirm that the sync level is more than 24% of video level.

Fig. E43 Pin 10 of TV Demodulator Unit  
0.2V/10 u-sec. div.

### 2-5-4. AUDIO LEVEL ADJUSTMENT

Test Point : Pin 15 of the  
TV Demodulator Unit  
Adjustment : R715 (AUDIO LEVEL)

1. Supply TV RF signal with audio modulation of 400Hz at 30% to the RF Input on the rear panel.
2. Connect the scope between Pin 15 of the TV Demodulator Unit and GND.
3. Set the AFT switch on the Tuning Control Unit to "ON".
4. Adjust the AUDIO LEVEL (R715) so that the level is 140 (+- 10)mVp-p.

### 2-5-5. RF AGC ADJUSTMENT

Test Point : TP7001  
Adjustment : R7004 (RF AGC)

A: Factory Adjustment

1. Tune in a color bar signal (VHF).
2. Set the AFT switch on the Tuning Control meter Unit to "ON".
3. Set the input level of electric field to 63 (+- 1) dBu.  
(Using the Attenuator and Spectrum Analyzer)

4. Connect the scope to TP7001 on the Demodulator Signal Process Section.
5. Turn the RF AGC (R7004) on the Demodulator Signal Process Section fully counterclockwise from foil side.
6. Then slowly turn the RF AGC (R7004) till just before the voltage drops.
7. Change the input electric field from 63 dBu to 66 dBu.
8. Confirm that the voltage at TP7001 has dropped more than 1.0V.

#### B. Field Adjustment

1. Supply a local TV Signal to the RF Input on the rear panel and tune to this signal.
2. Set the AFT switch on the Tuning Control Unit to "ON".
3. Connect the scope to pin 10 of TV Demodulator Unit and GND.
4. Adjust the RF AGC (R7004) so that the H-sync is Maximum and its shape can be observed clearly.

Fig. E44 Pin 10 of TV Demodulator Unit  
0.2V/20 u-sec. div.

5. Confirm that the noise band and beat do not appear on the TV screen.

#### Note :

This procedure is just a simplified method. So use the factory Adjustment for a more accurate or interchangeable adjustment.

### 2-6. IR WIRELESS RECEIVING DETECTOR SECTION

IR Wireless Receiving  
Detector Unit

Location of Test Points & Adjustment Points

(Component Side)

IR Wireless Receiving Detector Unit

Fig. E45

#### 2-6-1. TUNING ADJUSTMENT

Test Point : Pin 1 of P6026

Adjustment : T1 (TUNING)

1. First, place the deck so that the left side faces down. Hold the deck with your hand and then remove 2 red screws (A) and 2 screws (B), and remove the Front Frame Support Angle from the unit.

Fig. E46

2. Place the deck in the normal operating position. And then take out the IR Wireless Receiving Detector Unit from the Unit.
3. Place the IR Wireless Transmitter Unit and the Unit as shown below.

Fig. E47

4. Place the Unit in the stop mode.
5. Connect the scope to Pin 1 of P6026 on the Sub System Control Section.
6. Change the direction of the IR Wireless Transmitter Unit gradually with pushing the stop button on the IR Wireless Transmitter Unit until the waveform on the scope is just begins to be disturbed as shown below.

Fig. E48

7. Adjust the TUNING (T1) on the IR Wireless Receiving Detector Unit continuing the condition of item 6 so that the waveform at Pin 1 of P6026 is best (i.e. least disturbance possible).
8. Return the IR Wireless Receiving Detector Unit to the Unit.
9. Remove the scope.

## IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

SYSTEM CONTROL SECTION

COLOR BAR SIGNAL IN SP REC MODE WITH BRACKET.  
COLOR BAR SIGNAL IN SP PLAY MODE WITHOUT BRACKET.

SUB AUDIO SECTION  
VOLTAGE MEASUREMENT  
MONOSCOPE SIGNAL  
MONOSCOPE SIGNAL

**SPECIAL NOTE:**  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTORS ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

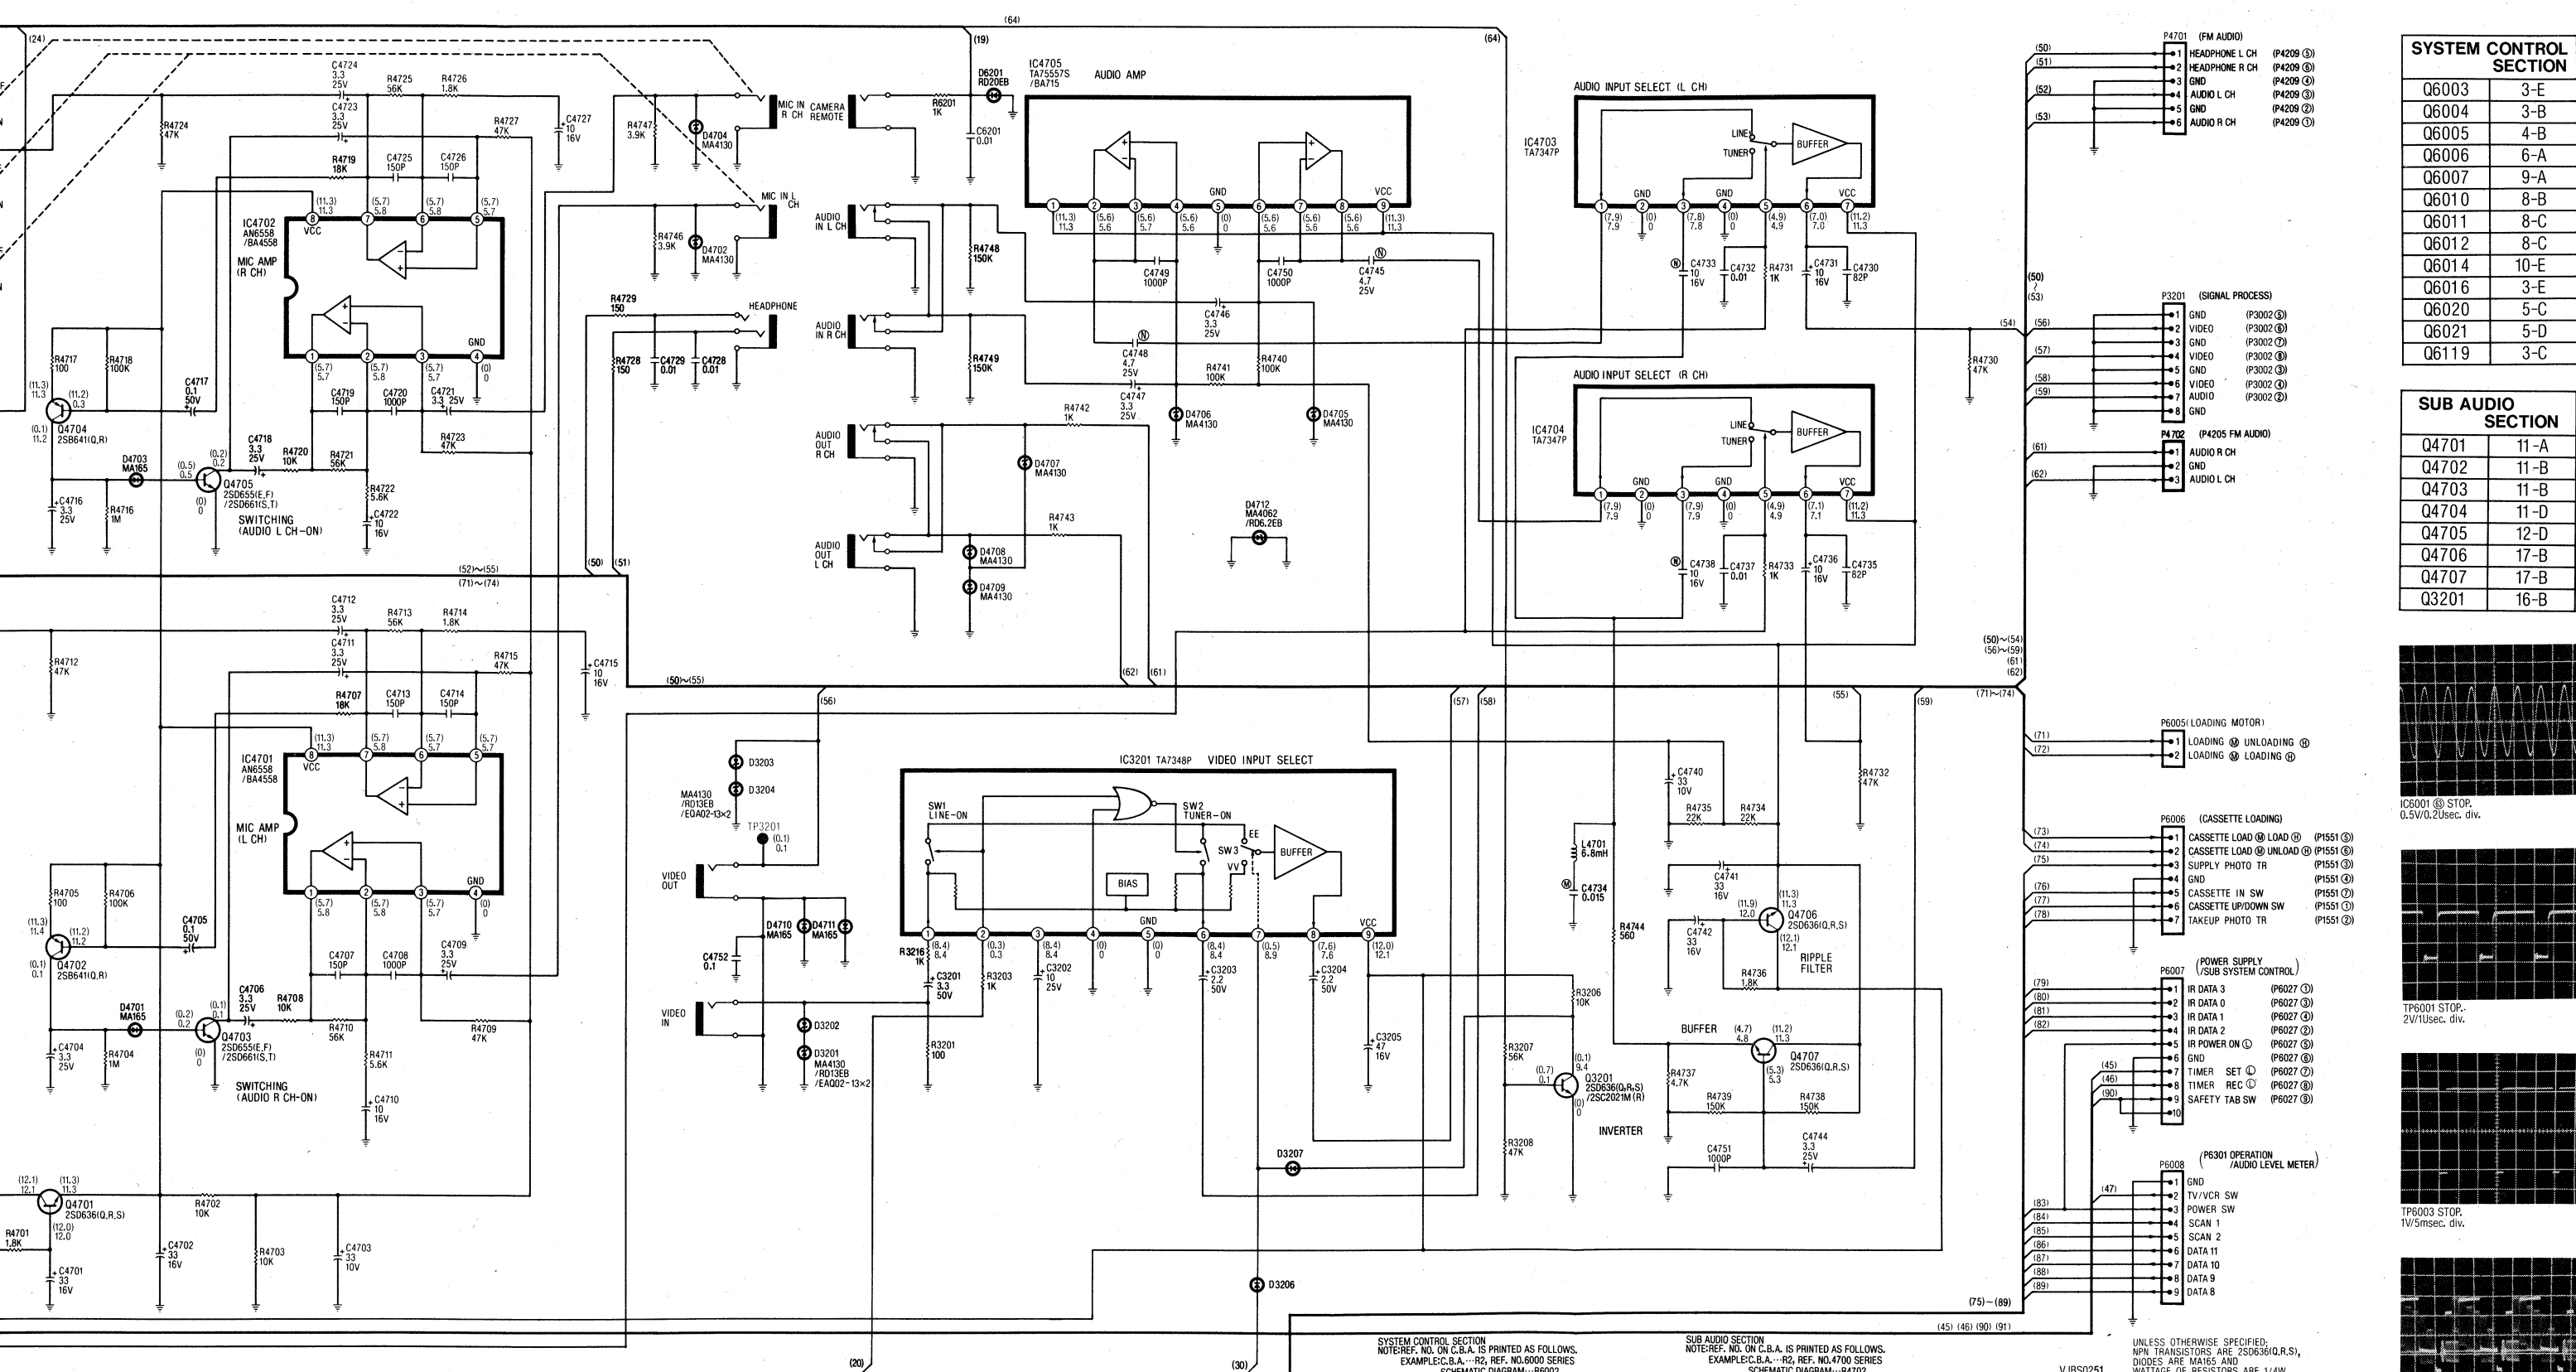

**IMPORTANT SAFETY NOTICE:**  
COMPONENTS IDENTIFIED BY THE SIGN  HAVE  
SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY.  
WHEN REPLACING ANY OF THESE COMPONENTS, USE  
ONLY THE SPECIFIED PARTS.

**SPECIAL NOTE:**  
ALL INTEGRATED CIRCUITS AND MANY OTHER SEMICONDUCTOR DEVICES ARE  
ELECTROSTATICALLY SENSITIVE AND THEREFORE REQUIRE THE SPECIAL  
HANDLING TECHNIQUES DESCRIBED UNDER THE "ELECTROSTATICALLY SENSITIVE  
(ES) DEVICES" SECTION OF THIS SERVICE MANUAL.

CALLOUTS NEXT TO WIRING PLUGS INDICATE CONNECTIONS TO OTHER SCHEMATIC DIAGRAM.

## 4-17 OPERATION /AUDIO LEVEL METER CIRCUIT

VOLTAGE MEASUREMENT : COLOR BAR SIGNAL  
IN STOP MODE.

WJBS06112

The diagram shows two integrated circuits, P7802 and P6301, connected to various components.

- P7802 (FM AUDIO)**: A 6-pin component. Pin 1 is GND (P4207 ③). Pin 2 is AUDIO GAIN R CH (P4207 ⑥). Pin 3 is AUDIO GAIN R CH (P4207 ⑤). Pin 4 is GND (P4207 ①). Pin 5 is AUDIO GAIN L CH (P4207 ②). Pin 6 is AUDIO GAIN L CH (P4207 ④).
- P6301 (P6008 SYSTEM CONTROL) /SUB AUDIO**: A 9-pin component. Pin 1 is GND. Pin 2 is TV/VCR SW. Pin 3 is POWER SW. Pin 4 is SCAN 1. Pin 5 is SCAN 2. Pin 6 is DATA 11. Pin 7 is DATA 10. Pin 8 is DATA 9. Pin 9 is DATA 8.

Other components shown include:

- A box labeled "AUDIO GAIN R CH" connected to pin 2 of P7802.
- A box labeled "AUDIO GAIN L CH" connected to pin 5 of P7802.
- A box labeled "POWER" connected to pin 3 of P6301.
- A box labeled "SW6302" connected to pins 2 and 3 of P6301.

## IMPORTANT SAFETY NOTICE

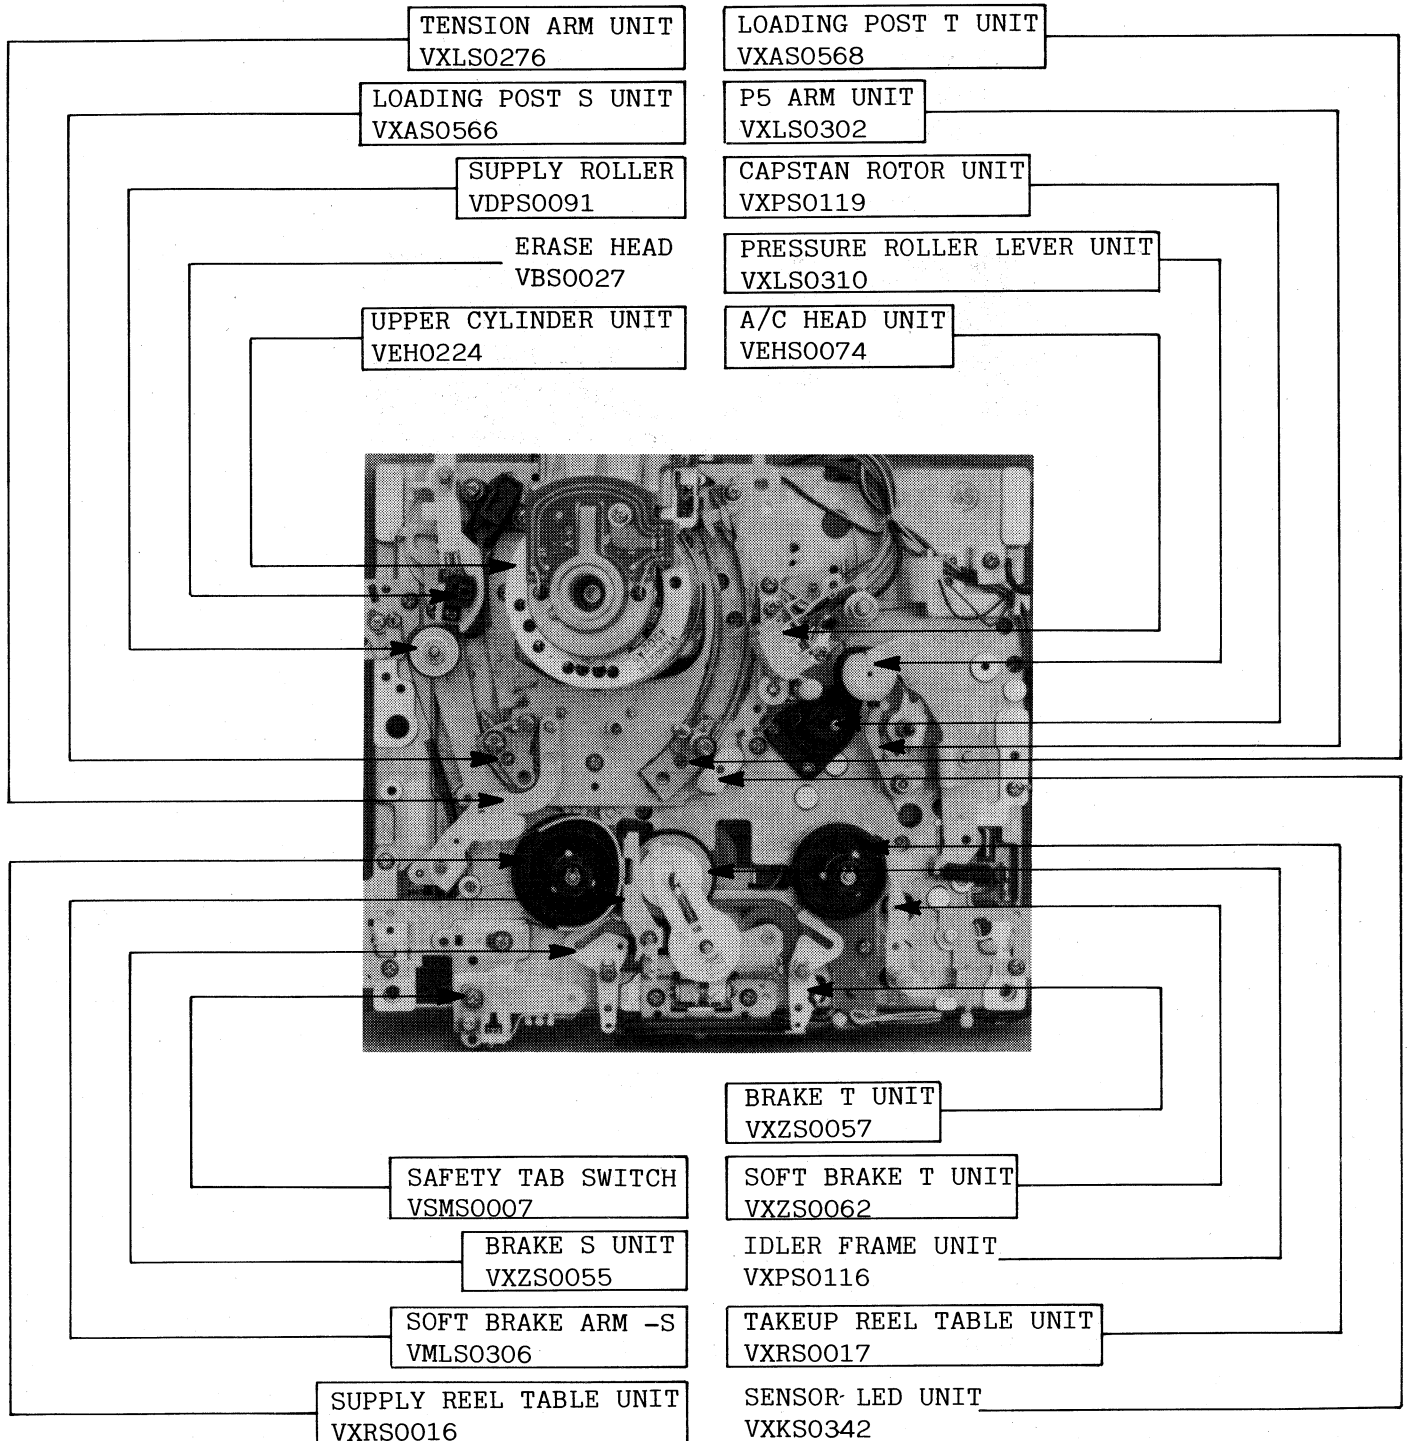

There are special components used in this equipment which are important for safety. These parts are shaded on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

# INNER PARTS LOCATION

\*This cut washer is not reusable. If removed, reinstall a new one.

## ELECTRICAL REPLACEMENT PARTS LIST

Model No. PV-1631M

### Special Notes

All integrated circuits and many other semiconductor devices are electrostatically sensitive and therefore require the special handling techniques described under the "Electrostatically Sensitive (ES) Devices" section of this service manual.

### Note

1. Be sure to make your orders of replacement parts according to this list.

### 2. IMPORTANT SAFETY NOTICE

Components identified by the sign  have special characteristics important for safety.

When replacing any of these components, use only the specified parts.

3. Unless otherwise specified:

All resistors are in OHMS ( $\Omega$ ), 1/4W,  $\pm 5\%$ , carbon, K=1,000 $\Omega$ , M=1,000K $\Omega$ .

All capacitors are in MICROFARADS (UF), P=UUF,  $\pm 10\%$ .

All coils are in MICROHENRIES (UH), M=10<sup>3</sup>U,  $\pm 10\%$ .

4. C.B.A.: Circuit Board Assembly.

5. P.C.B.: Print Circuit Board.
